Course on Discrete Mathematics for GATE 2023

Conversion of POSET into a Hasse Diagram

- If we want to study Partial order relation further then it will be better to convert it into more convenient notation so that it can be studied easily.
- This graphical representation is called Hasse Diagram

- In order theory, a Hasse diagram is a type of mathematical diagram used to represent a finite partially ordered set, in the form of a drawing of its transitive reduction.
- The diagrams are named after Helmut Hasse (1898–1979)

Steps to convert partial order relation into hasse diagram

- 1- Draw a vertex for each element in the Set
- 2- If $(a, b) \in R$ then draw an edge from a to b
- 3- Remove all Reflexive and Transitive edges
- 4- Remove the direction of edges and arrange them in the increasing order of heights.

Q Consider a Partial order relation and convert it into hasse diagram?

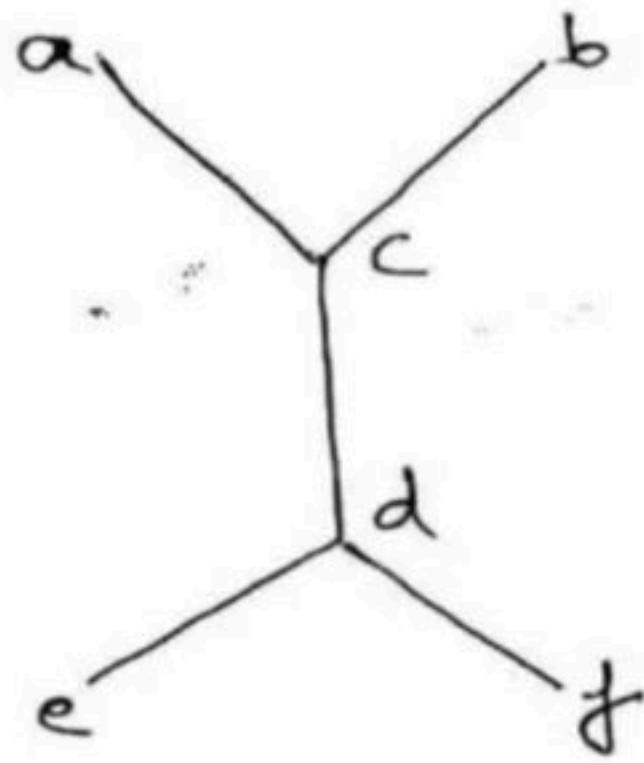

$$R = \{(1,1), (1,2), (1,4), (1,8), (2,2), (2,4), (2,8), (4,4), (4,8), (8,8)\}$$

Q Consider a Partial order relation and convert it into hasse diagram?

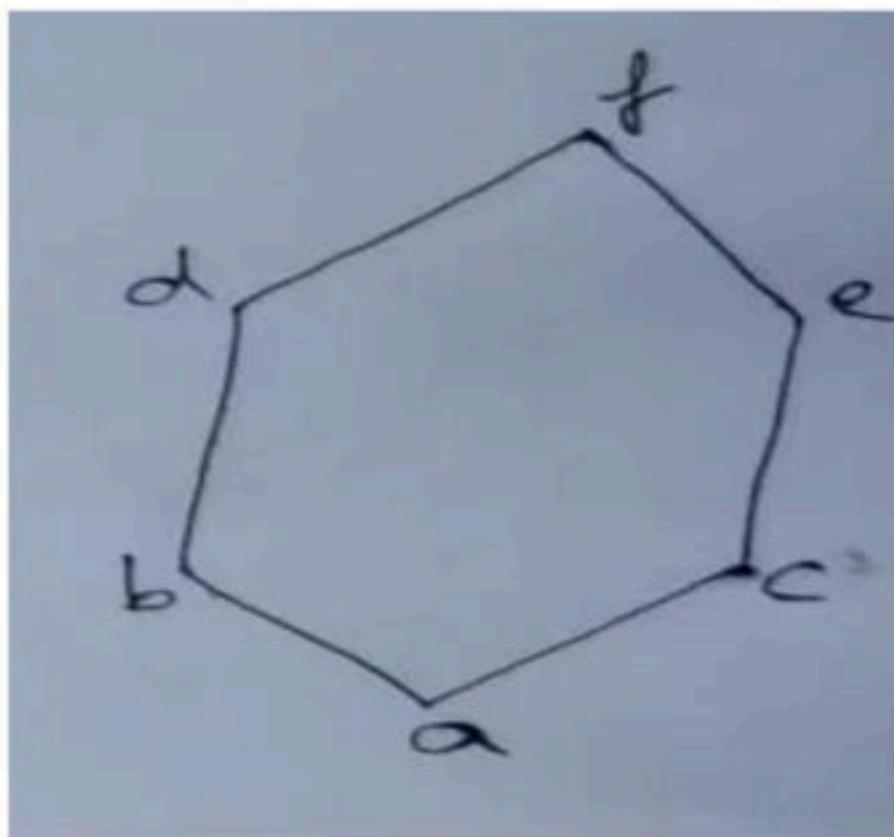

R = {(1,1), (1,2), (1,3), (1,6), (2,2), (2,6), (3,3), (3,6), (6,6)}

Break

(7)

(8)

(9)

(10)

Conclusion

- We can not have a horizontal edge in a hasse diagram
- We can not have a reflexive and transitive edge in Hasse Diagram

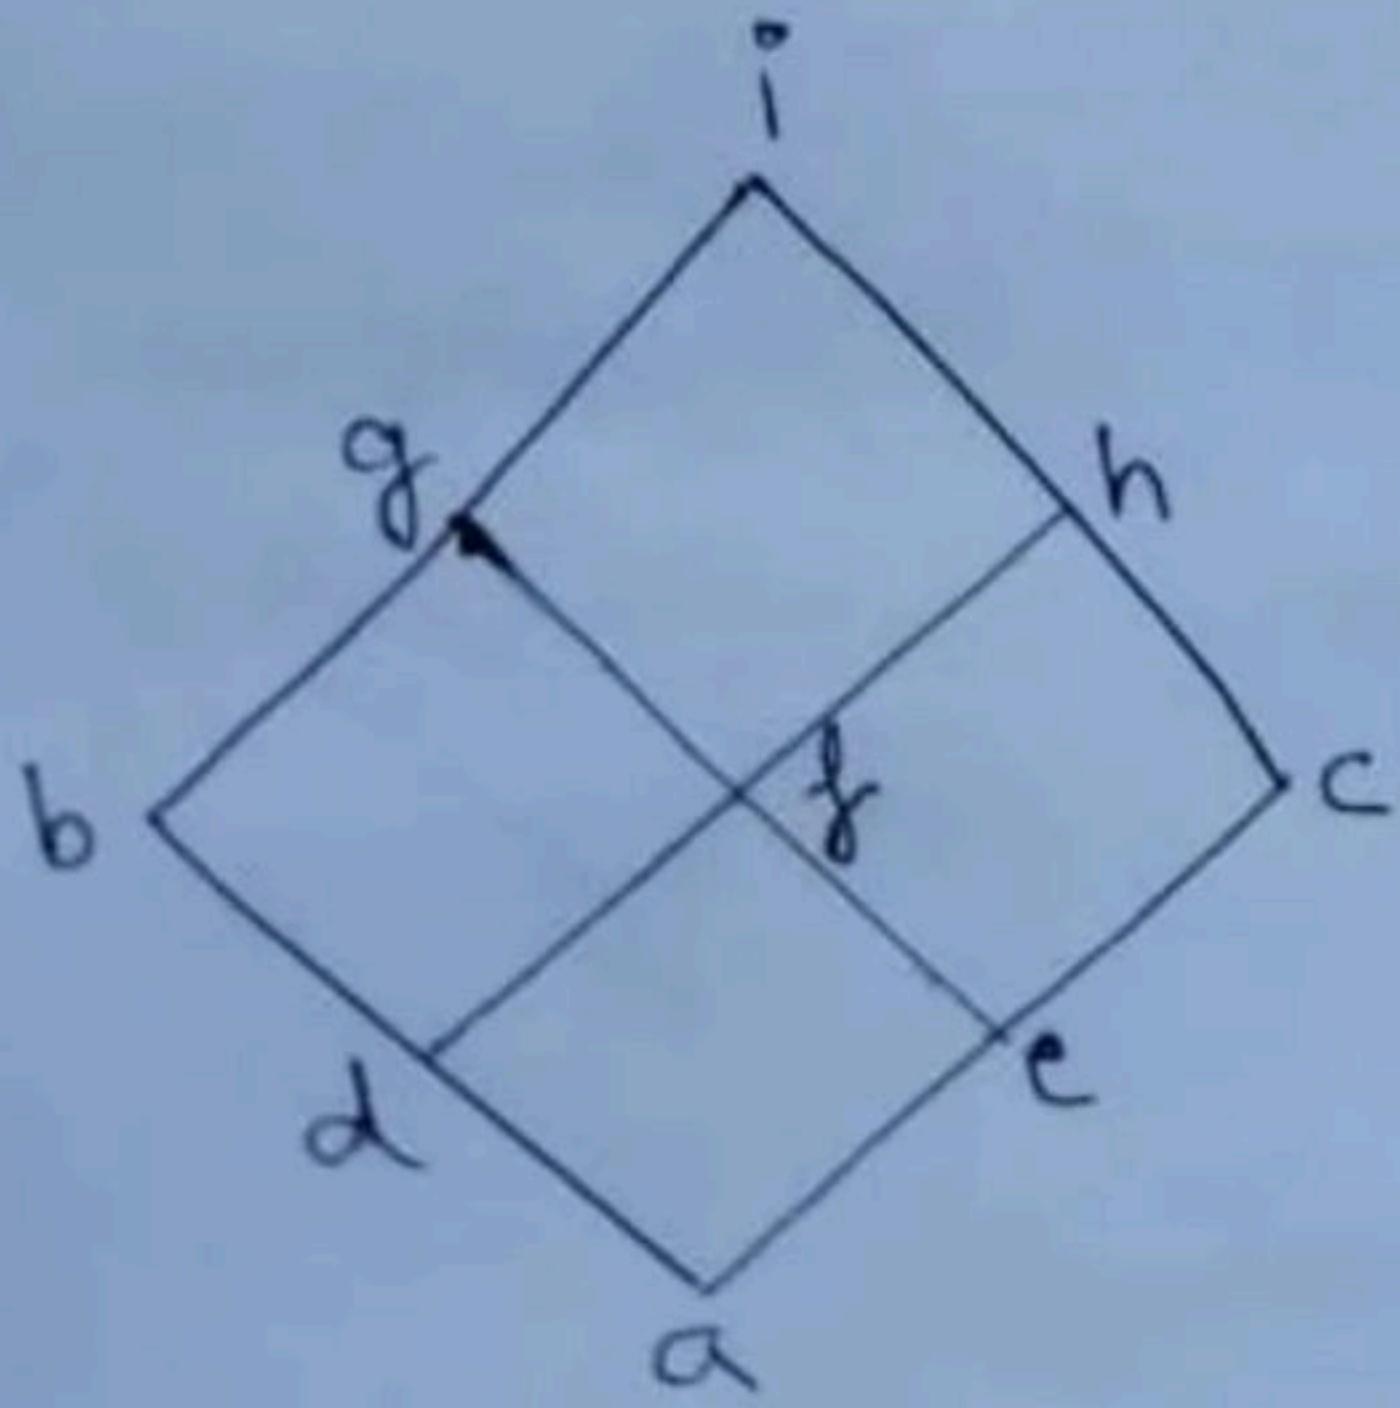

Q Let $X = \{2, 3, 6, 12, 24\}$, Let \leq be the partial order defined by $X \leq Y$ if x divides y . Number of edges as in the Hasse diagram of (X, \leq) is. **(GATE-1996) (1 Marks)**

- (a)** 3
- (b)** 4
- (c)** 9
- (d)** None of the above

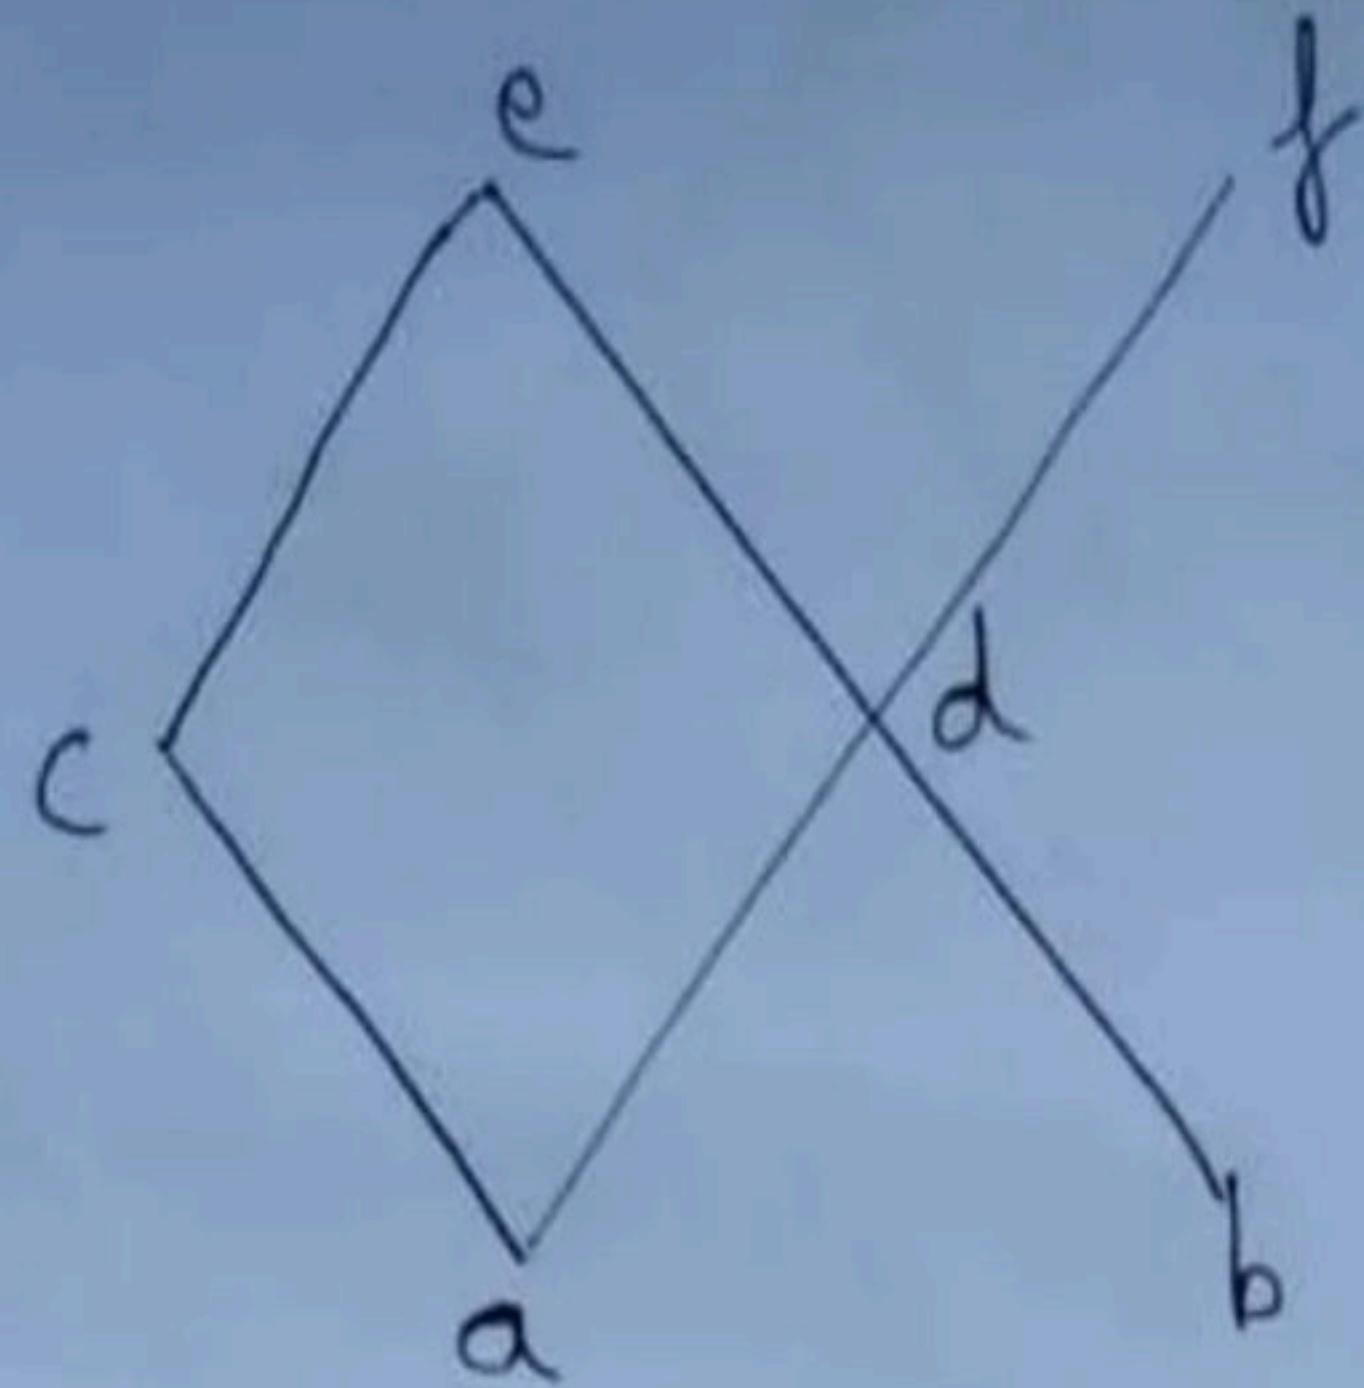

Break

Elements of a Poset

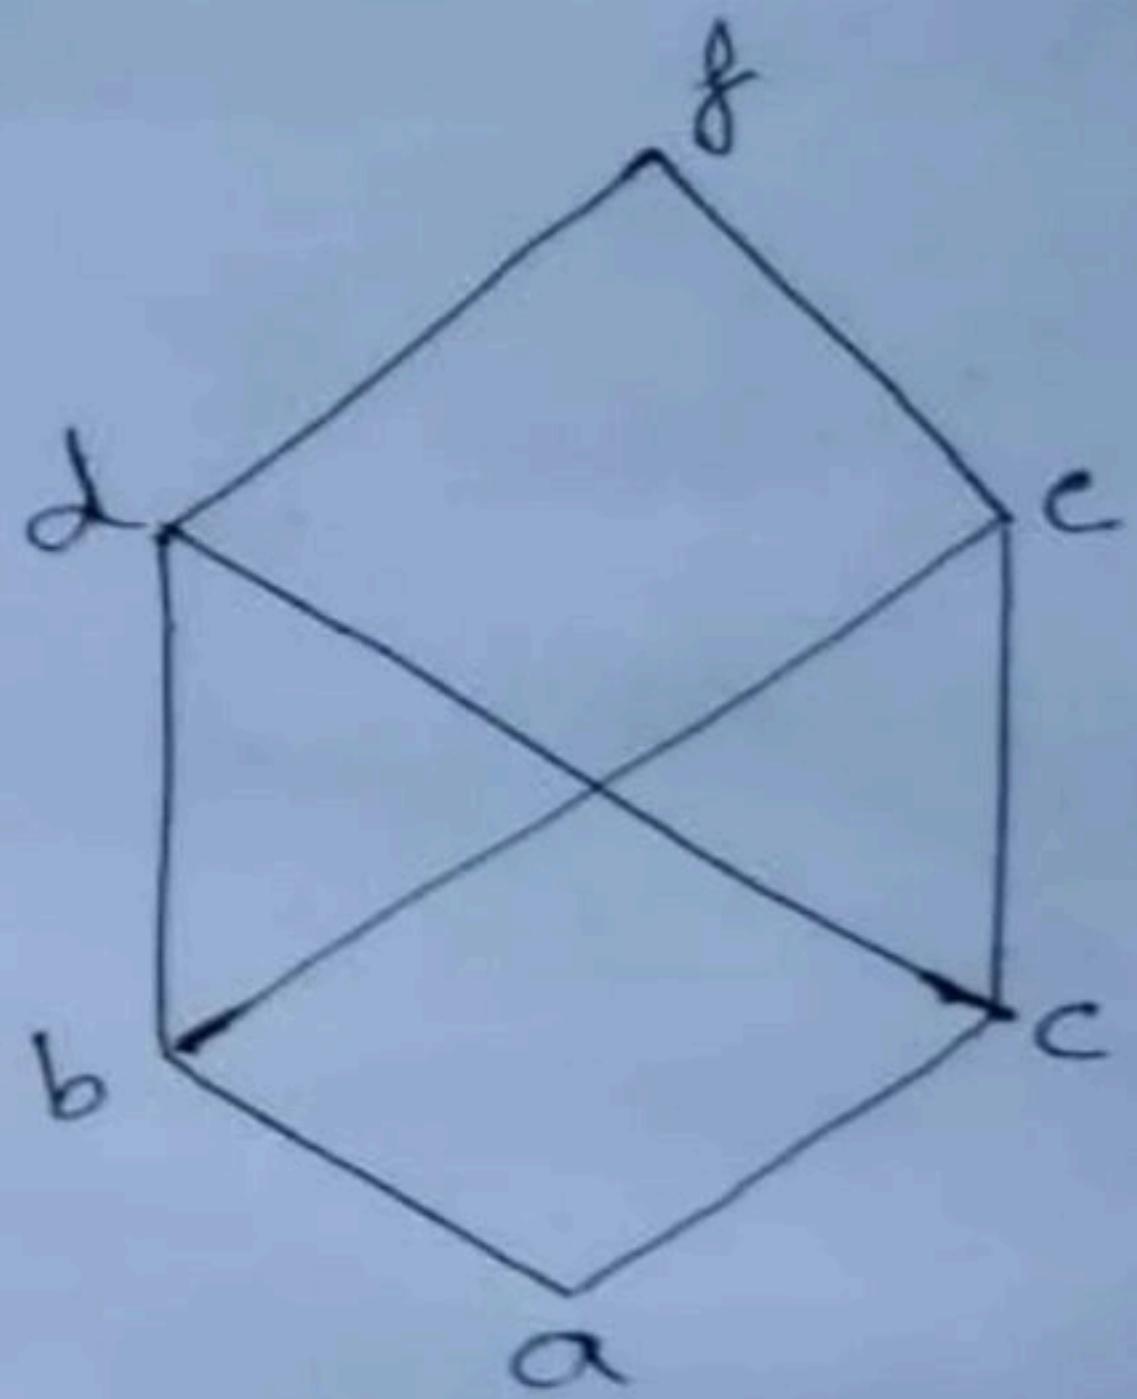

1. **Maximal Element:** - An element is said to be maximal if it is not related to any other element in the Partial order relation.
2. **Minimal Element:** - An element is said to be minimal if no other element is related to it in the Partial order relation.

	Elements
Minimal	a
Least	a
Maximal	i

Q Consider the set $X=\{a, b, c, d, e\}$ under partial ordering $R=\{(a, a), (a, b), (a, c), (a, d), (a, e), (b, b), (b, c), (b, e), (c, c), (c, e), (d, d), (d, e), (e, e)\}$. The Hasse diagram of the partial order (X, R) is shown below. The minimum number of ordered pairs that need to be added to R to make (X, R) a lattice is _____ (GATE-2017) (1 Marks)

Q A partially ordered set is said to be a lattice if every two elements in the set have **(NET-Dec-2010)**

- a) a unique least upper bound
- b) a unique greatest lower bound
- c) both (A) and (B)
- d) none of the above

Q Consider the following Hasse diagrams

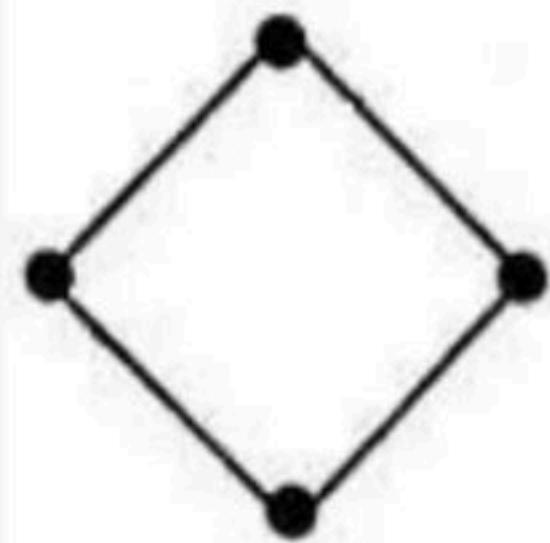

Which all of the above represent a lattice? **(GATE-2008) (2 Marks)**

(A) (i) and (iv) only

(B) (ii) and (iii) only

(C) (iii) only

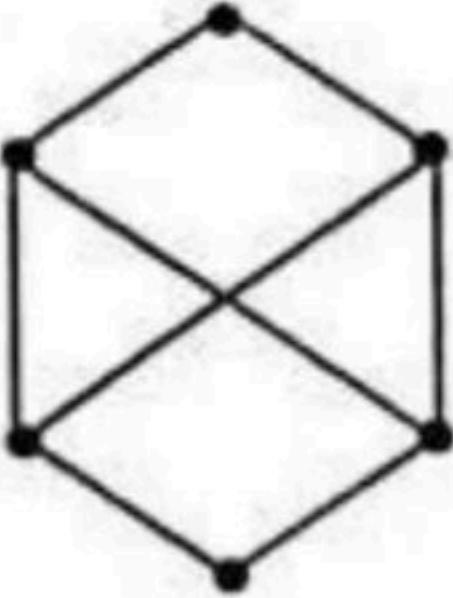

(D) (i), (ii) and (iv) only

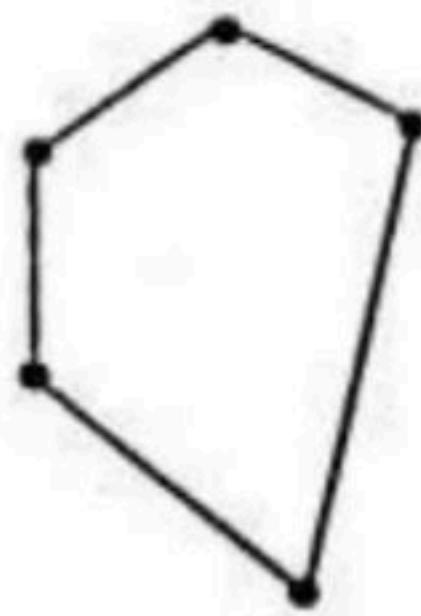

(i)

(ii)

(iii)

(iv)

Q the inclusion of which of the following set into $S = \{\{1,2\}, \{1,2,3\}, \{1,3,5\}, \{1,2,4\}, \{1,2,3,4,5\}\}$ is necessary and sufficient to make S a complete lattice under the partial order defined by set containment?

(GATE-2004) (2 Marks)

- a) {1}**
- b) {1}, {2,3}**
- c) {1}, {1,3}**
- d) {1}, {1,3}, {1,2,3,4}, {1,2,3,5}**

Boolean algebra

- **Unbounded Lattice** :- If a lattice has infinite of elements then it is called Unbounded Lattice.

- **Bounded Lattice** :- If a lattice has finite number of elements then it is called Bounded lattice, there will be upper and lower bound in lattice.

- **Complement of an element in a Lattice** :- If two elements a and a^c , are complement of each other, then the following equations must always hold good.

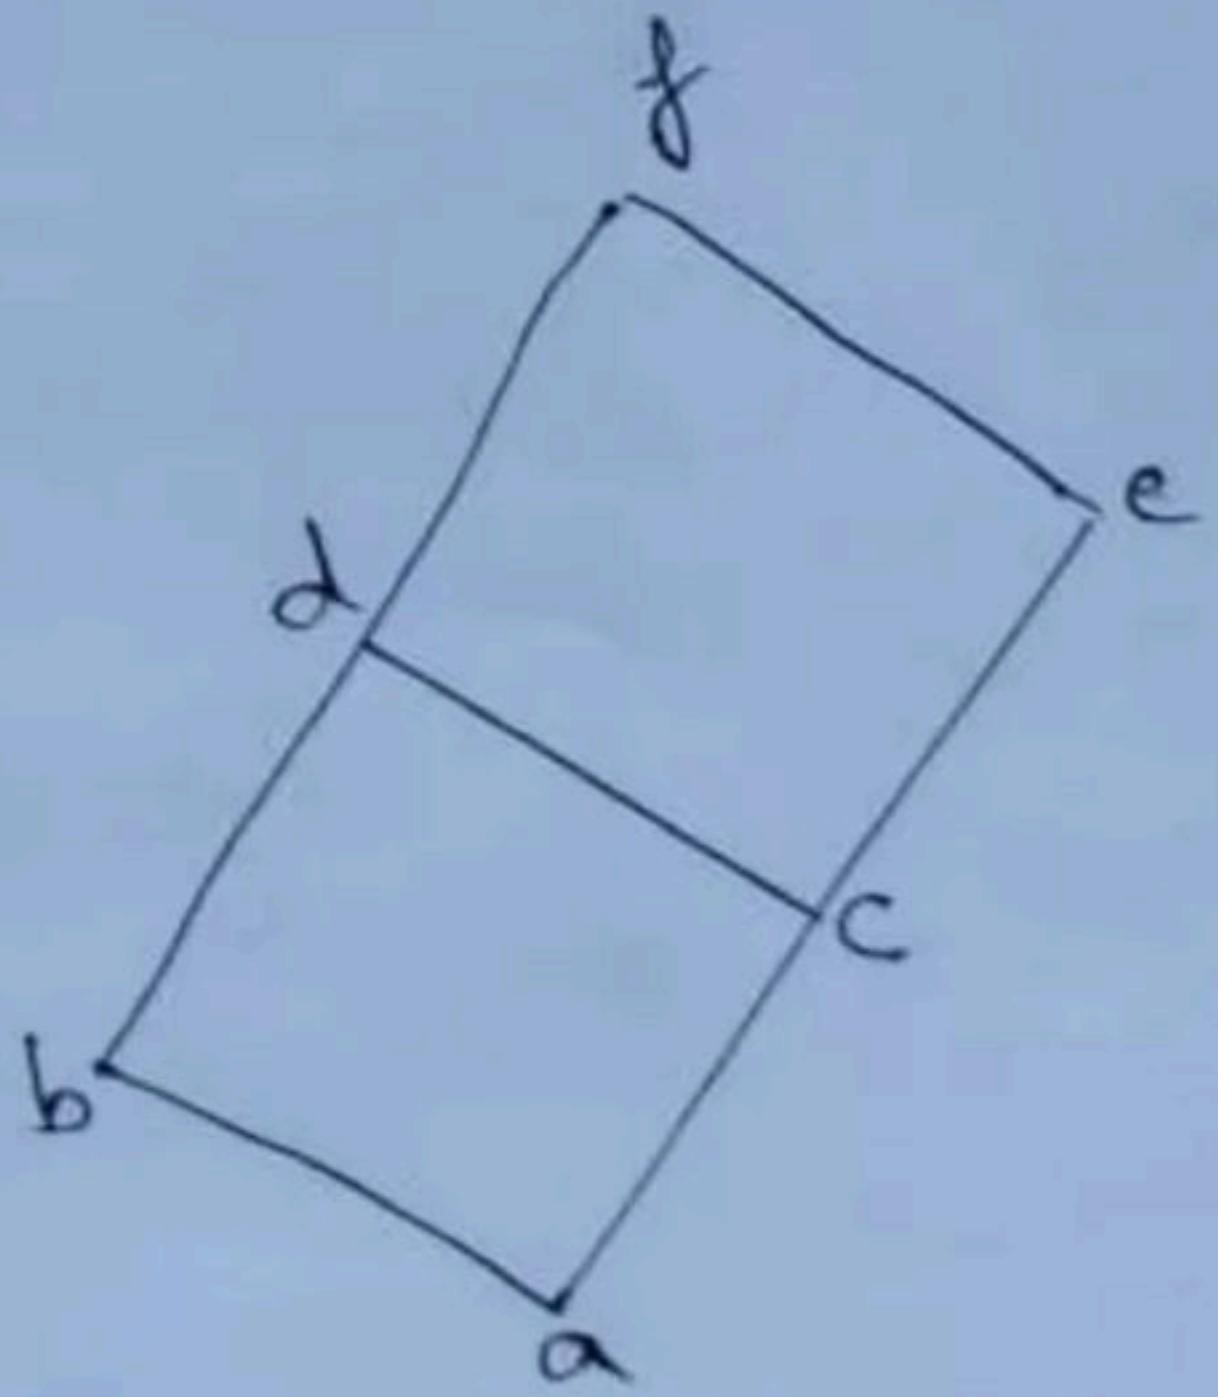

$a \vee a^c = \text{Upper bound of lattice}$

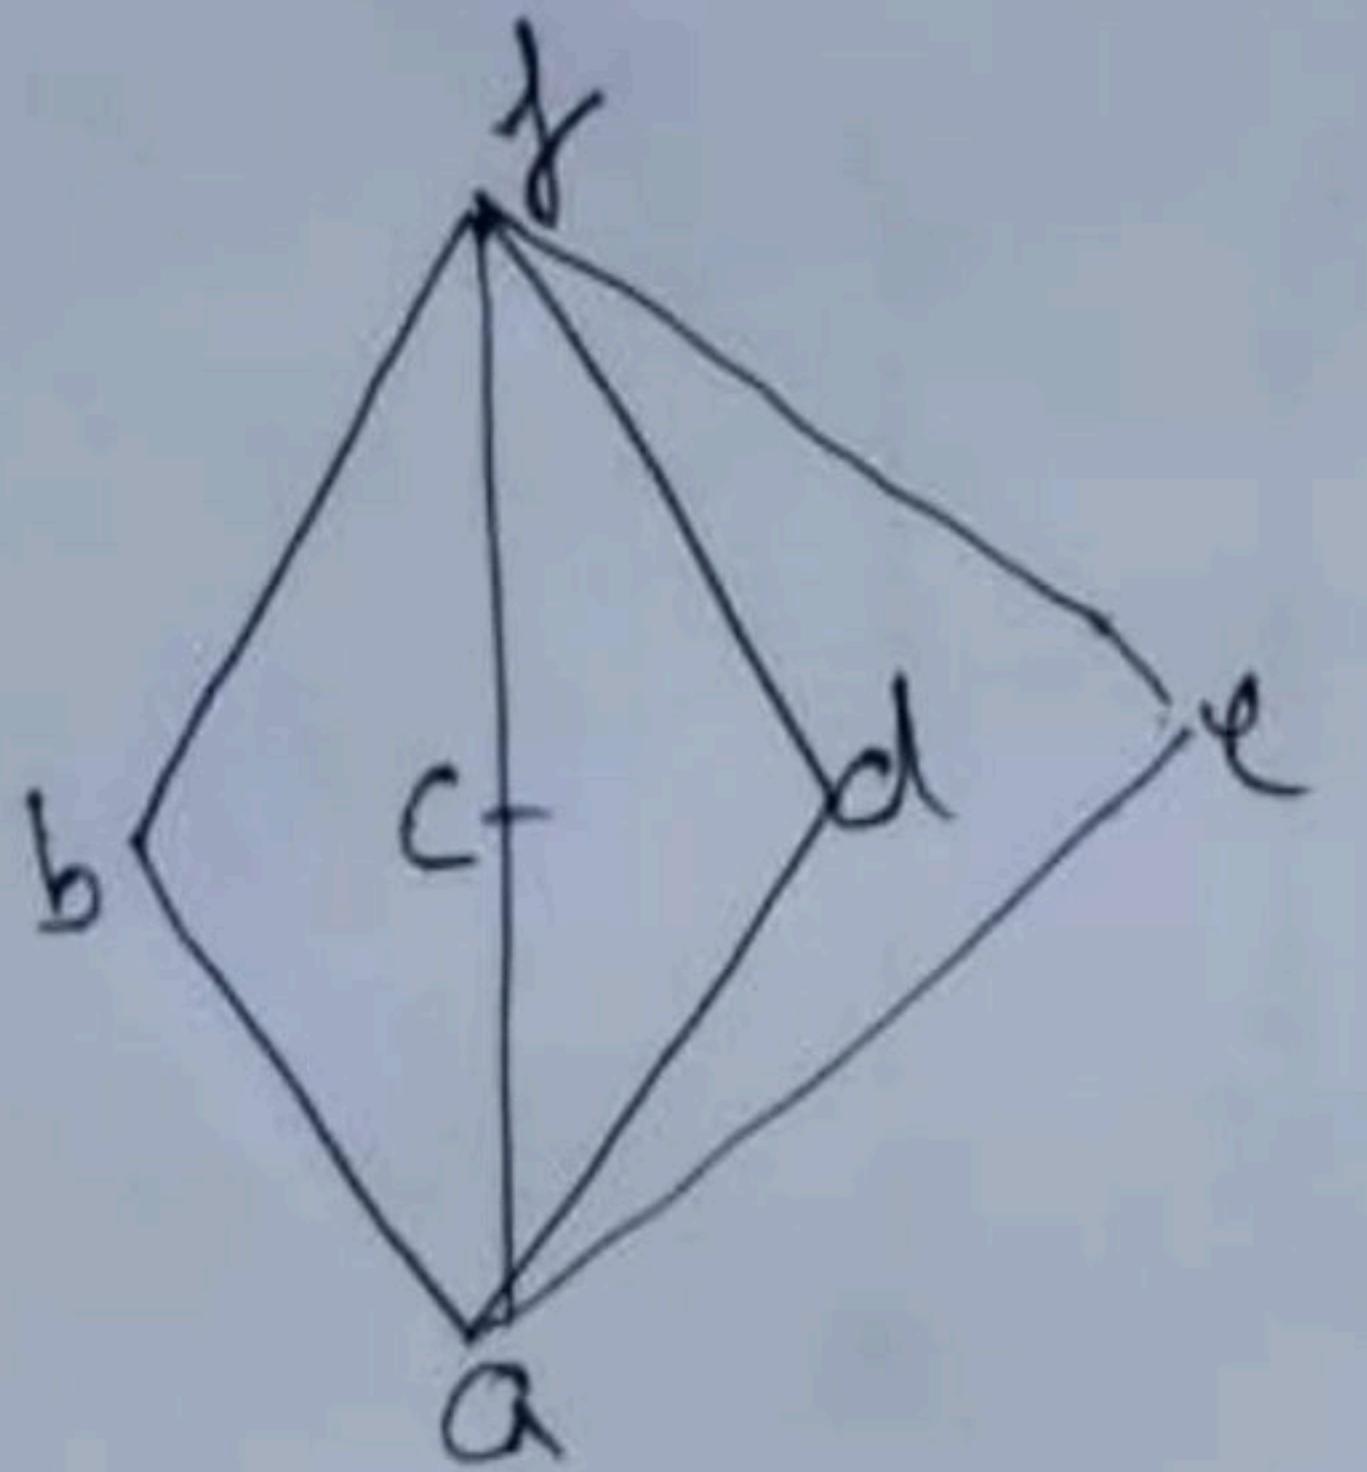

$a \wedge a^c = \text{Lower bound of lattice}$

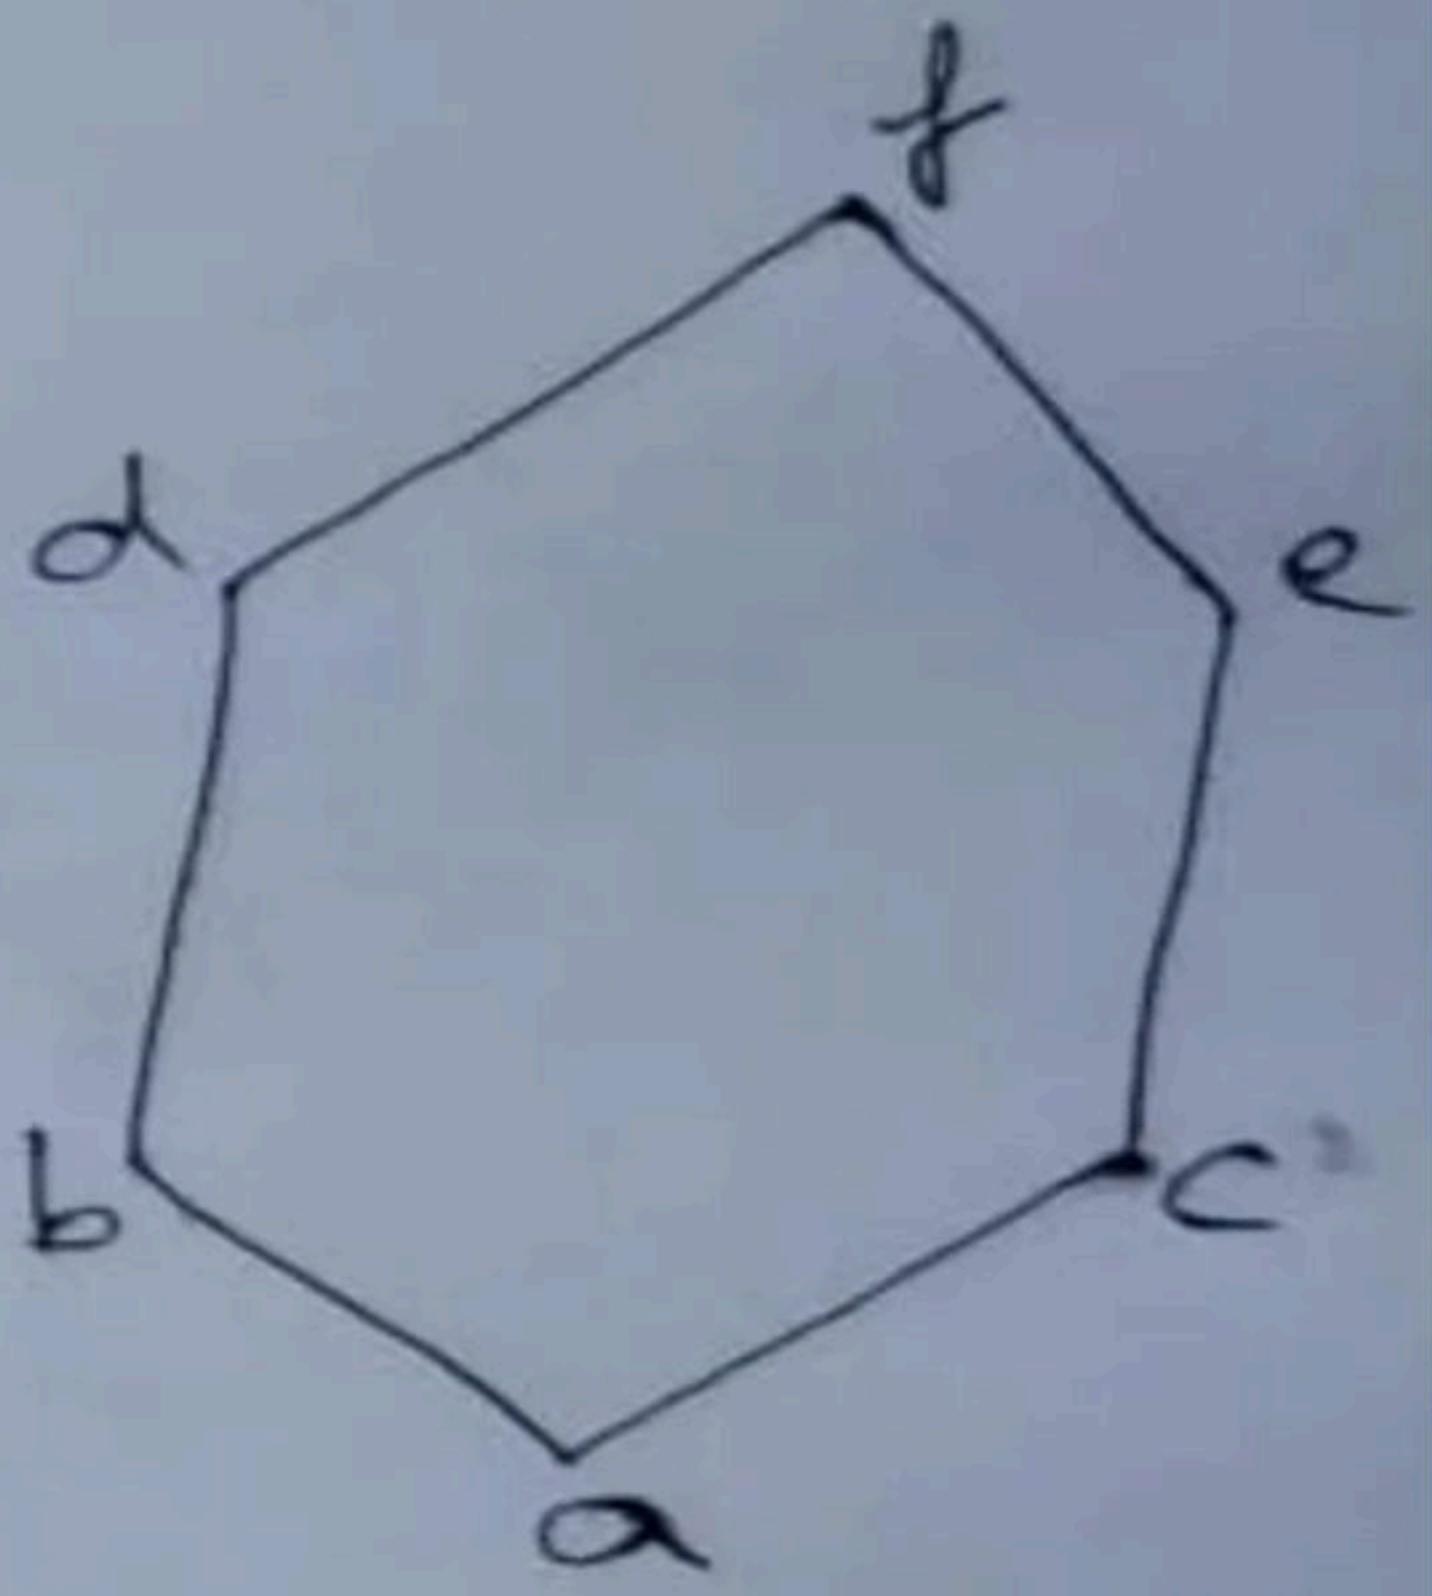

- **Distributive Lattice** :- A lattice is said to be distributed lattice. if for every element their exist at most one completemt(zero or one).

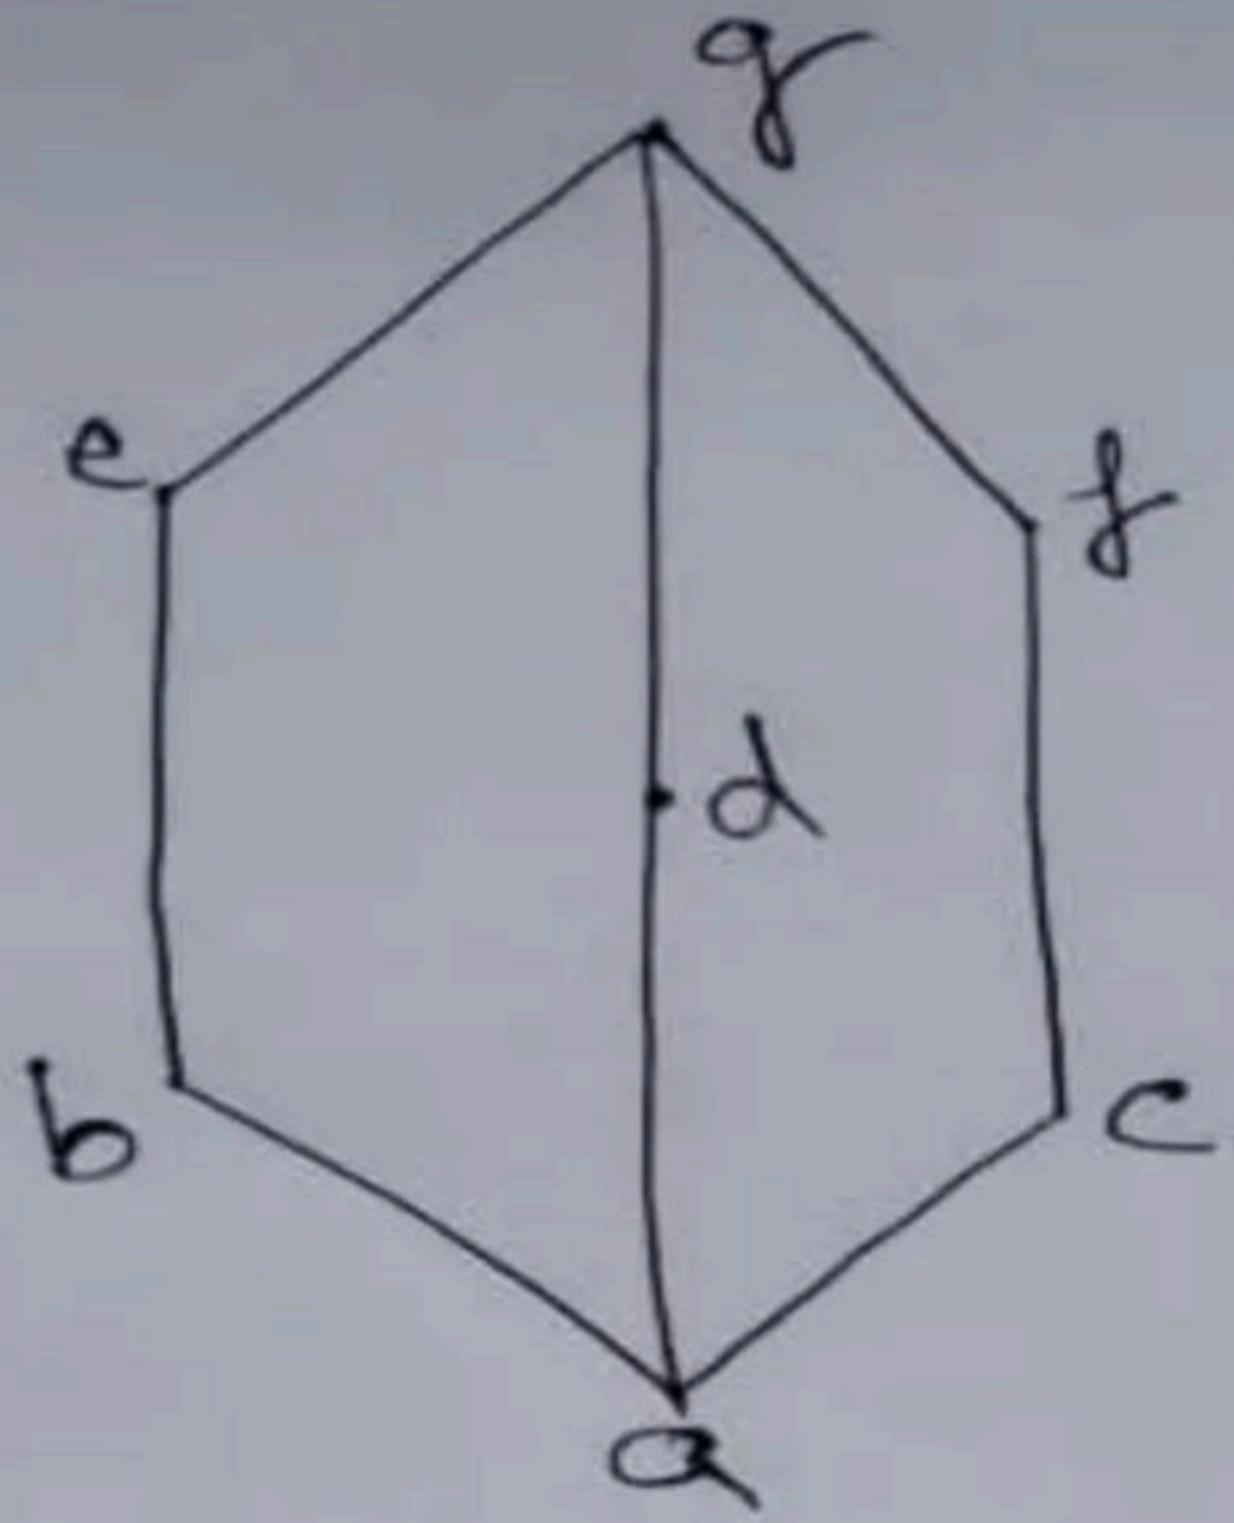

- **Complement Lattice** :- A Lattice is said to be Complement lattice. if for every element there exist at least one complement(one or more).

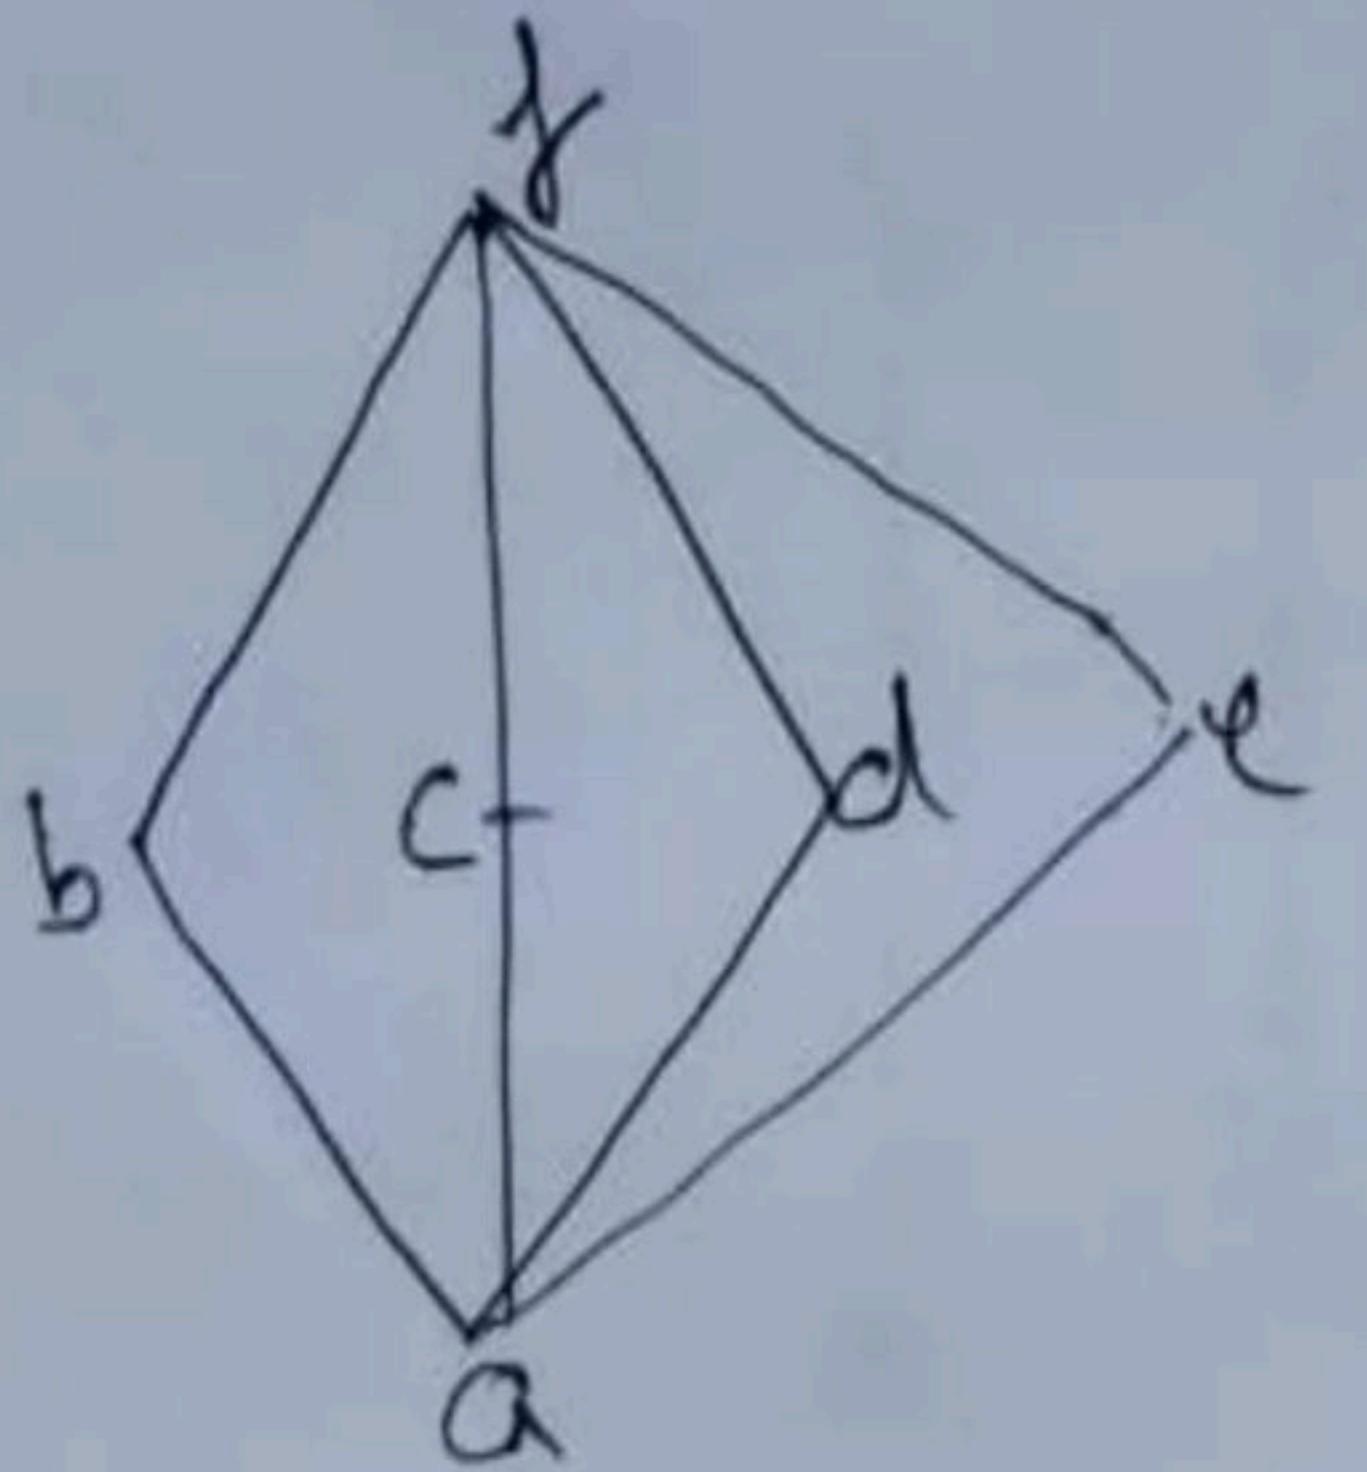

- **Boolean Algebra** :- A Lattice is said to be Boolean Algebra, if for every element there exist exactly one complement. Or if a lattice is both complemented and distributed then it is called Boolean Algebra.

Q The following is the Hasse diagram of the Poset $\{\{a, b, c, d, e\}, \leq\}$

The Poset is **(GATE-2005) (1 Marks)**

- (A)** not a lattice
- (B)** a lattice but not a distributive lattice
- (C)** a distributive lattice but not a Boolean algebra
- (D)** a Boolean algebra

Q The complement(s) of the element 'a' in the lattice shown in below figure is (are) _____
(GATE-1988) (2 Marks)

Q Find which of the following is a lattice and Boolean Algebra?

(1) $[D_{10}, /]$

(2) $[D_{12}, /]$

(3) $[D_{30}, /]$

(4) $[D_{45}, /]$

(5) $[D_{64}, /]$

(6) $[D_{81}, /]$

(7) $[D_{91}, /]$

(8) $[D_{110}, /]$

Q Find which of the following is a lattice and Boolean Algebra?

(1) $[\{1,2,3,4,6,9\}, /]$

(2) $[\{2,3,4,6,12\}, /]$

(3) $[\{1,2,3,5,30\}, /]$

(4) $[\{1,2,3,6,9,18\}, /]$

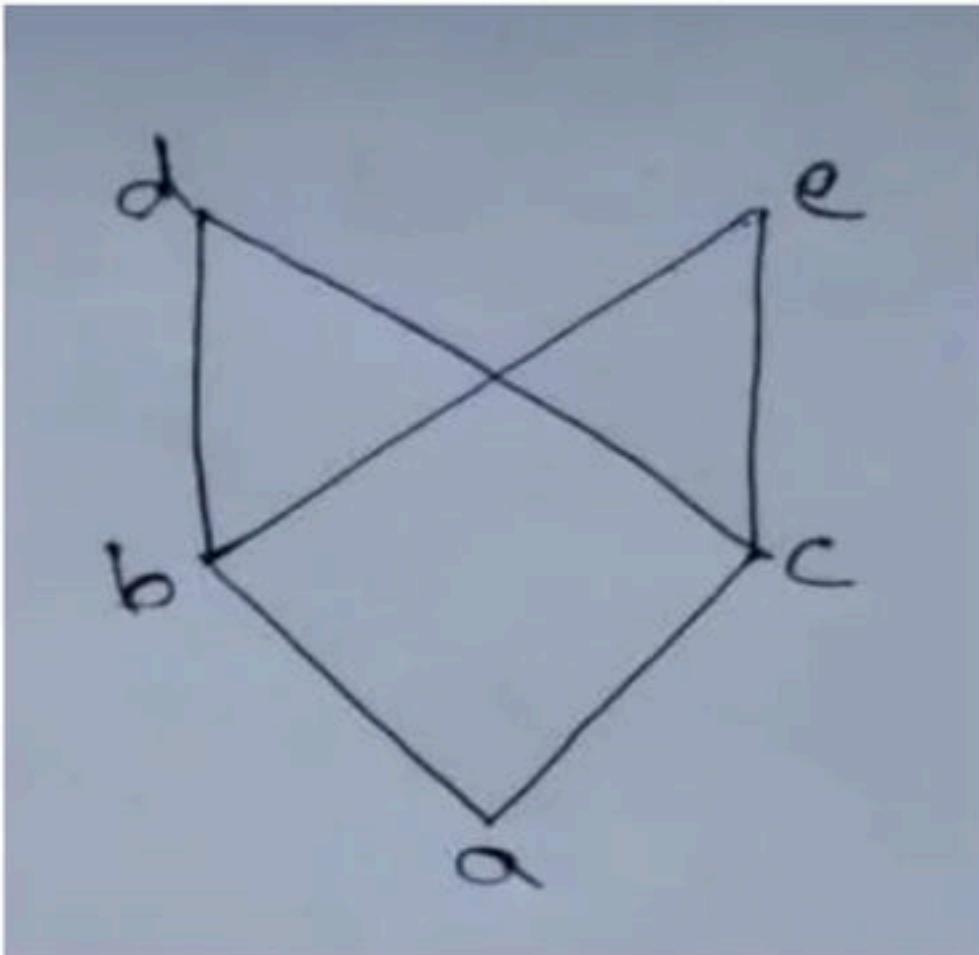

(5) $[\{2,3,4,9,12,18\}, /]$

(6) $[R, \leq]$

(7) $[P(A), \sqsubseteq], A = \{1,2,3\}$

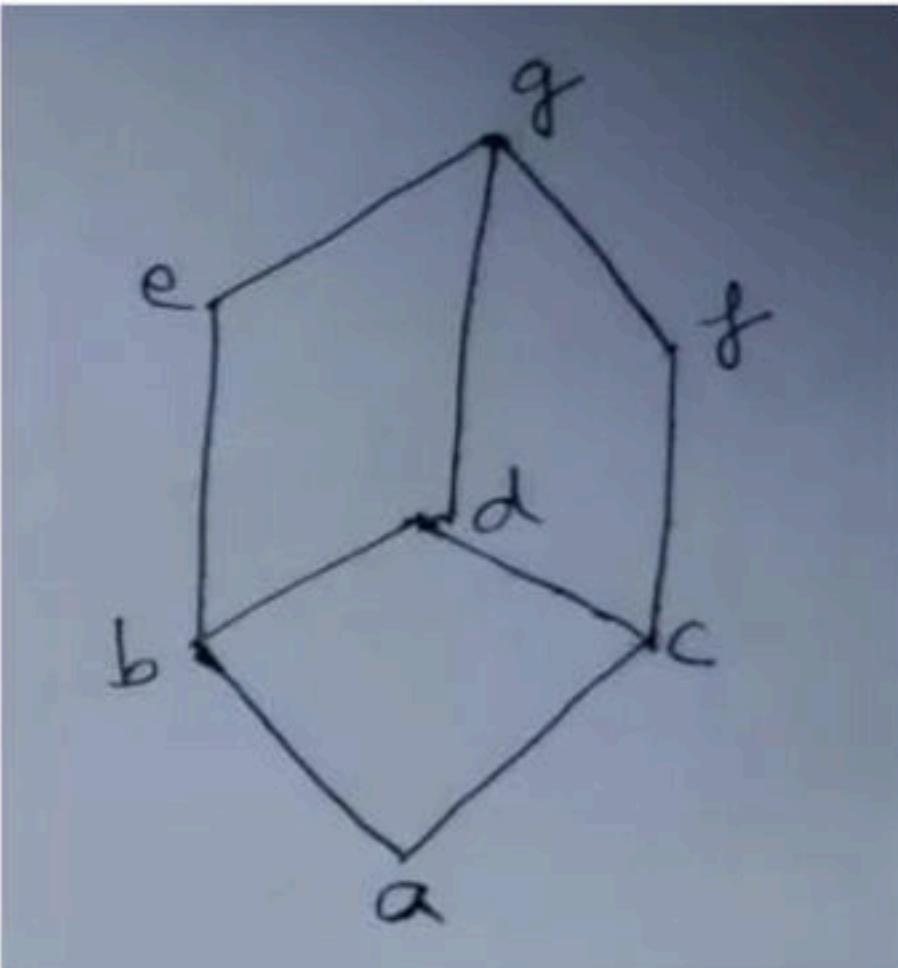

Q Consider the following hasse diagram,
find which of the following is true?

- a) it is a lattice
- b) subset {a, b, c , d} is a lattice
- c) subset {b, c, d, e} is a lattice
- d) subset {a, b, c, e} is a lattice

Q Consider the following hasse diagram, find which of the following is true?

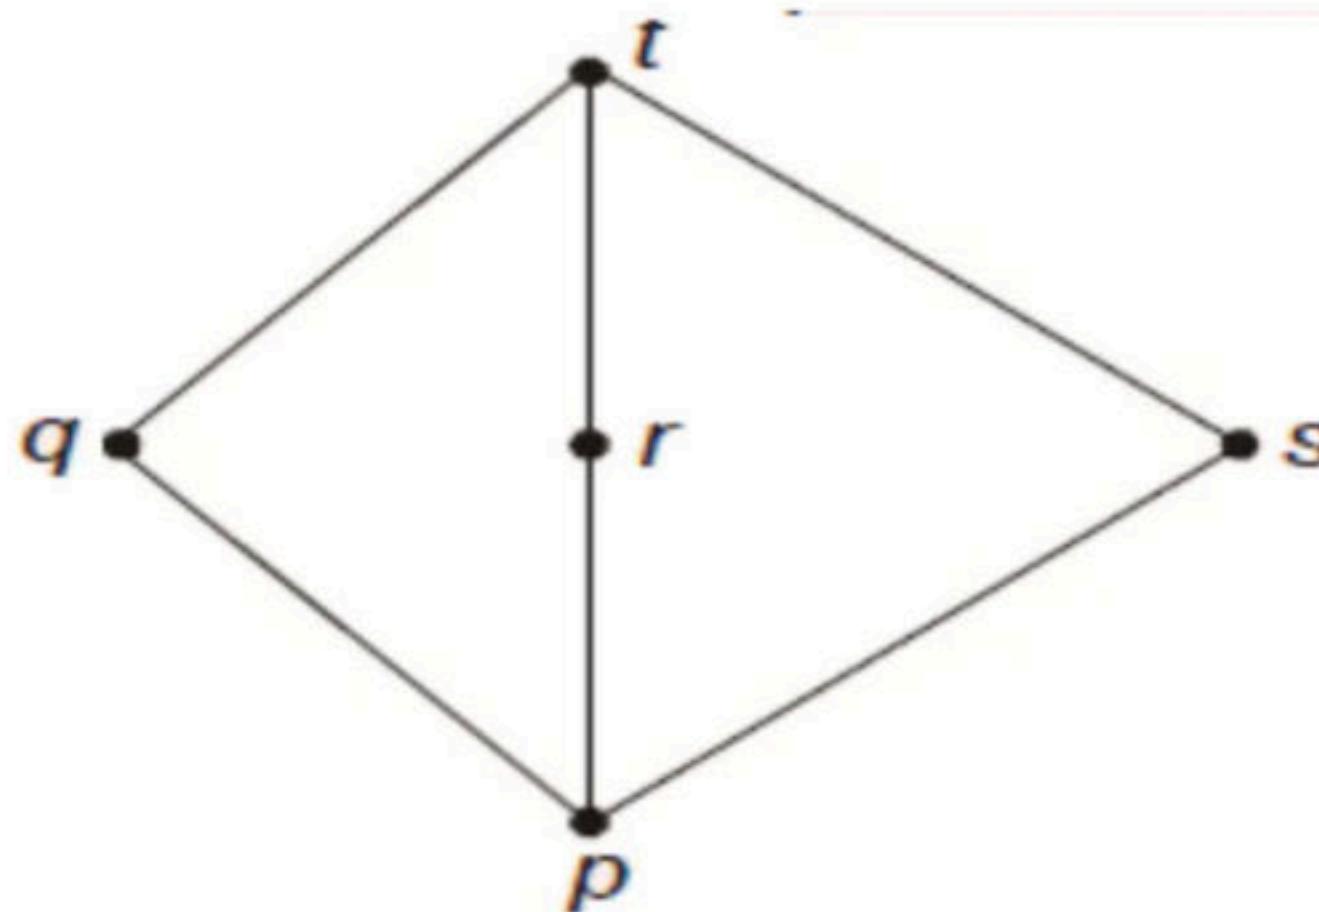

- a) subset $\{a, b, c, g\}$ is a lattice
- b) subset $\{a, b, f, g\}$ is a lattice
- c) subset $\{a, d, e, g\}$ is a lattice
- d) subset $\{a, c, e, g\}$ is a lattice

Q Suppose $L = \{p, q, r, s, t\}$ is a lattice represented by the following Hasse diagram:
For any $x, y \in L$, not necessarily distinct, $x \vee y$ and $x \wedge y$ are join and meet of x, y respectively. Let $L^3 = \{(x, y, z) : x, y, z \in L\}$ be the set of all ordered triplets of the elements of L . Let P_r be the probability that an element $(x, y, z) \in L^3$ chosen equiprobably satisfies $x \vee (y \wedge z) = (x \vee y) \wedge (x \vee z)$. Then **(GATE-2015) (2 Marks)**

- (A)** $P_r = 0$ **(B)** $P_r = 1$ **(C)** $0 < P_r \leq 1/5$ **(D)** $1/5 < P_r < 1$

Q Consider the set $S = \{a, b, c, d\}$.

Consider the following 4 partitions $\pi_1, \pi_2, \pi_3, \pi_4$ on S :

$$\pi_1 = \{\overline{abcd}\}, \quad \pi_2 = \{\overline{ab}, \overline{cd}\}, \quad \pi_3 = \{\overline{abc}, \overline{d}\}, \quad \pi_4 = \{a, b, c, d\}$$

Let \prec be the partial order on the set of partitions $S' = \{\pi_1, \pi_2, \pi_3, \pi_4\}$ defined as follows: $\pi_i \prec \pi_j$ if and only if π_i refines π_j . The Poset diagram for (S', \prec) is: **(GATE-2007) (2 Marks)**
