

# Group Theory - Part III

Course on Discrete Mathematics for GATE 2023

## First order Predicate Logic

- Sometime propositional logic cannot derive any meaningful information even though, we as human can understand that argument is meaningful or not.
- $P_1$ : Every Indian like cricket
- $P_2$ : Sunny is an Indian
- Q: Sunny Likes cricket
- The reason propositional logic fails here because using only inference system we can not conclude Q from  $P_1$  and  $P_2$ .

- In first order logic we understand, a new approach of subject and predicate to extract more information from a statement
  - 1 is a natural number (1 is subject, natural number is predicate)
  - we can write FOPL (short hand notation) for this as  $\text{NatNo}(1) = 1$  is natural number
  - Similarly, we can understand the meaning of  $\text{NatNo}(2)$  as 2 is a natural number
  - $\text{NatNo}(x)$ : x is a natural number

- Sometime subject is not a single element but representing the entire group.
  - Every Indian like Cricket.
  - We can have a propositional function  $\text{Cricket}(x)$ : x likes Cricket.
  - We can fix domain of discussion or universe of discourse as, x is an Indian.

- If i say four Indian are there  $I_1, I_2, I_3, I_4$
- $I_1 \text{ likes cricket} \wedge I_2 \text{ likes cricket} \wedge I_3 \text{ likes cricket} \wedge I_4 \text{ likes cricket}$
- $\text{Cricket}(I_1) \wedge \text{Cricket}(I_2) \wedge \text{Cricket}(I_3) \wedge \text{Cricket}(I_4)$
- But problem with this notation is as there is 130+ corers Indian this formula will become very long and in some case we actually do not know how many subjects are there in the universe of discourse. so, we again need a short hand formula.
- $\forall_x \text{Cricket}(x)$ , if we confine x to be Indian then it means every x like cricket.

- **Universal quantifiers**: - The universal quantification of a propositional function is the proposition that asserts
- $P(x)$  is true for all values of  $x$  in the universe of discourse.
- The universe of discourse specifies the possible value of  $x$ .
- $\forall_x P(x)$ , i.e. for all value of  $x$   $P(x)$  is true

**Break**

- Let try some other statement ‘Some Indian like samosa’
  - if i say four Indian are there  $I_1, I_2, I_3, I_4$
  - $I_1 \text{ like samosa} \vee I_2 \text{ like samosa} \vee I_3 \text{ like samosa} \vee I_4 \text{ like samosa}$
  - $\text{Samosa}(I_1) \vee \text{Samosa}(I_2) \vee \text{Samosa}(I_3) \vee \text{Samosa}(I_4)$
  - $\exists_x \text{ Samosa}(x)$ , if we confine x to be Indian then it means some x likes samosa.

- **Existential quantifiers**: - with existential quantifier of a propositional that is true if and only if  $P(x)$  is true for at least one value of  $x$  in the universe of discourse.
- There exists an element  $x$  in the universe of discourse such that  $P(x)$  is true.
- $\exists_x P(x)$ , i.e. for at least one value of  $x$   $P(x)$  is true

**Break**

- let's change the universe of discourse from Indian to human
  - if human is Indian then it likes cricket
  - $\text{Indian}(x)$ :  $x$  is an Indian
  - $\text{Cricket}(x)$ :  $x$  likes Cricket
- if  $I_1$  is Indian then likes cricket  $\wedge$  if  $I_2$  is Indian then likes cricket  $\wedge$  if  $I_3$  is Indian then likes cricket  $\wedge$  if  $I_4$  is Indian then likes cricket
- $[\text{Indian}(I_1) \rightarrow \text{cricket}(I_1)] \wedge [\text{Indian}(I_2) \rightarrow \text{cricket}(I_2)] \wedge [\text{Indian}(I_3) \rightarrow \text{cricket}(I_3)] \wedge [\text{Indian}(I_4) \rightarrow \text{cricket}(I_4)]$
- $\forall_x [\text{Indian}(x) \rightarrow \text{cricket}(x)]$

- let's change the universe of discourse from Indian to human
  - if human is Indian then it likes samosa
  - $\text{Indian}(x)$ :  $x$  is an Indian
  - $\text{Samosa}(x)$ :  $x$  likes Samosa
- if  $I_1$  is Indian then likes samosa  $\vee$  if  $I_2$  is Indian then likes samosa  $\vee$  if  $I_3$  is Indian then likes samosa  $\vee$  if  $I_4$  is Indian then likes samosa
- $[\text{Indian}(I_1) \wedge \text{samosa}(I_1)] \vee [\text{Indian}(I_2) \wedge \text{samosa}(I_2)] \vee [\text{Indian}(I_3) \wedge \text{samosa}(I_3)] \vee [\text{Indian}(I_4) \wedge \text{samosa}(I_4)]$
- $\exists_x [\text{Indian}(x) \wedge \text{samosa}(x)]$

- let check validity of a statement “Some Indians like samosa” =  $\exists_x [\text{Indian}(x) \rightarrow \text{samosa}(x)]$ , x is human
- let human contains four elements  $I_1, I_2, I_3, I_4$  out of which  $I_1, I_2$  are Indian while  $I_3, I_4$  are not Indian
- Suppose  $I_1, I_2, I_3$  do not likes samosa
  - $[\text{Indian}(I_1) \rightarrow \text{samosa}(I_1)] \vee [\text{Indian}(I_2) \rightarrow \text{samosa}(I_2)] \vee [\text{Indian}(I_3) \rightarrow \text{samosa}(I_3)]$
  - $[\text{T} \rightarrow \text{F}] \vee [\text{T} \rightarrow \text{F}] \vee [\text{F} \rightarrow \text{F}]$
  - $[\text{F}] \vee [\text{F}] \vee [\text{T}]$
  - T
- conclusion  $\exists_x$  is not used with  $\rightarrow$

**Break**

## Negation

- $\neg [\forall_x P(x)] = \exists_x \neg P(x)$
- $\neg [\exists_x P(x)] = \forall_x \neg P(x)$

Let  $L(x, y)$ :  $x$  like  $y$ , which means  $x$  likes  $y$  or  $y$  is liked by  $x$

$$1 - \forall_x \forall_y L(x, y)$$

$$2 - \forall_y \forall_x L(x, y)$$

$$3 - \exists_x \exists_y L(x, y)$$

$$4 - \exists_y \exists_x L(x, y)$$

5-  $\forall_x \exists_y L(x, y)$

6-  $\exists_y \forall_x L(x, y)$

7-  $\forall_y \exists_x L(x, y)$

8-  $\exists_x \forall_y L(x, y)$

**Break**

**Q Negation of the proposition  $\exists_x H(x)$  (NET-Jan-2017)**

- (A)  $\exists_x \neg H(x)$**       **(B)  $\forall_x \neg H(x)$**       **(C)  $\forall_x H(x)$**       **(D)  $\neg \exists_x H(x)$**

**Q** Consider the first-order logic sentence

F:  $\forall_x (\exists_y R(x, y))$ . Assuming non-empty logical domains, which of the sentences below are implied by F? (GATE-2017) (1 Marks)

- I.  $\exists_y (\exists_x R(x, y))$
- II.  $\exists_y (\forall_x R(x, y))$
- III.  $\forall_y (\exists_x R(x, y))$
- IV.  $\sim \exists_x (\forall_y \sim R(x, y))$

- (A) IV only
- (B) I and IV only
- (C) II only
- (D) II and III only

**Q** Consider the first-order logic sentence

$F: \forall_x (\exists_y R(x, y))$ . Assuming non-empty logical domains, which of the sentences below are implied by  $F$ ? (GATE-2017) (1 Marks)

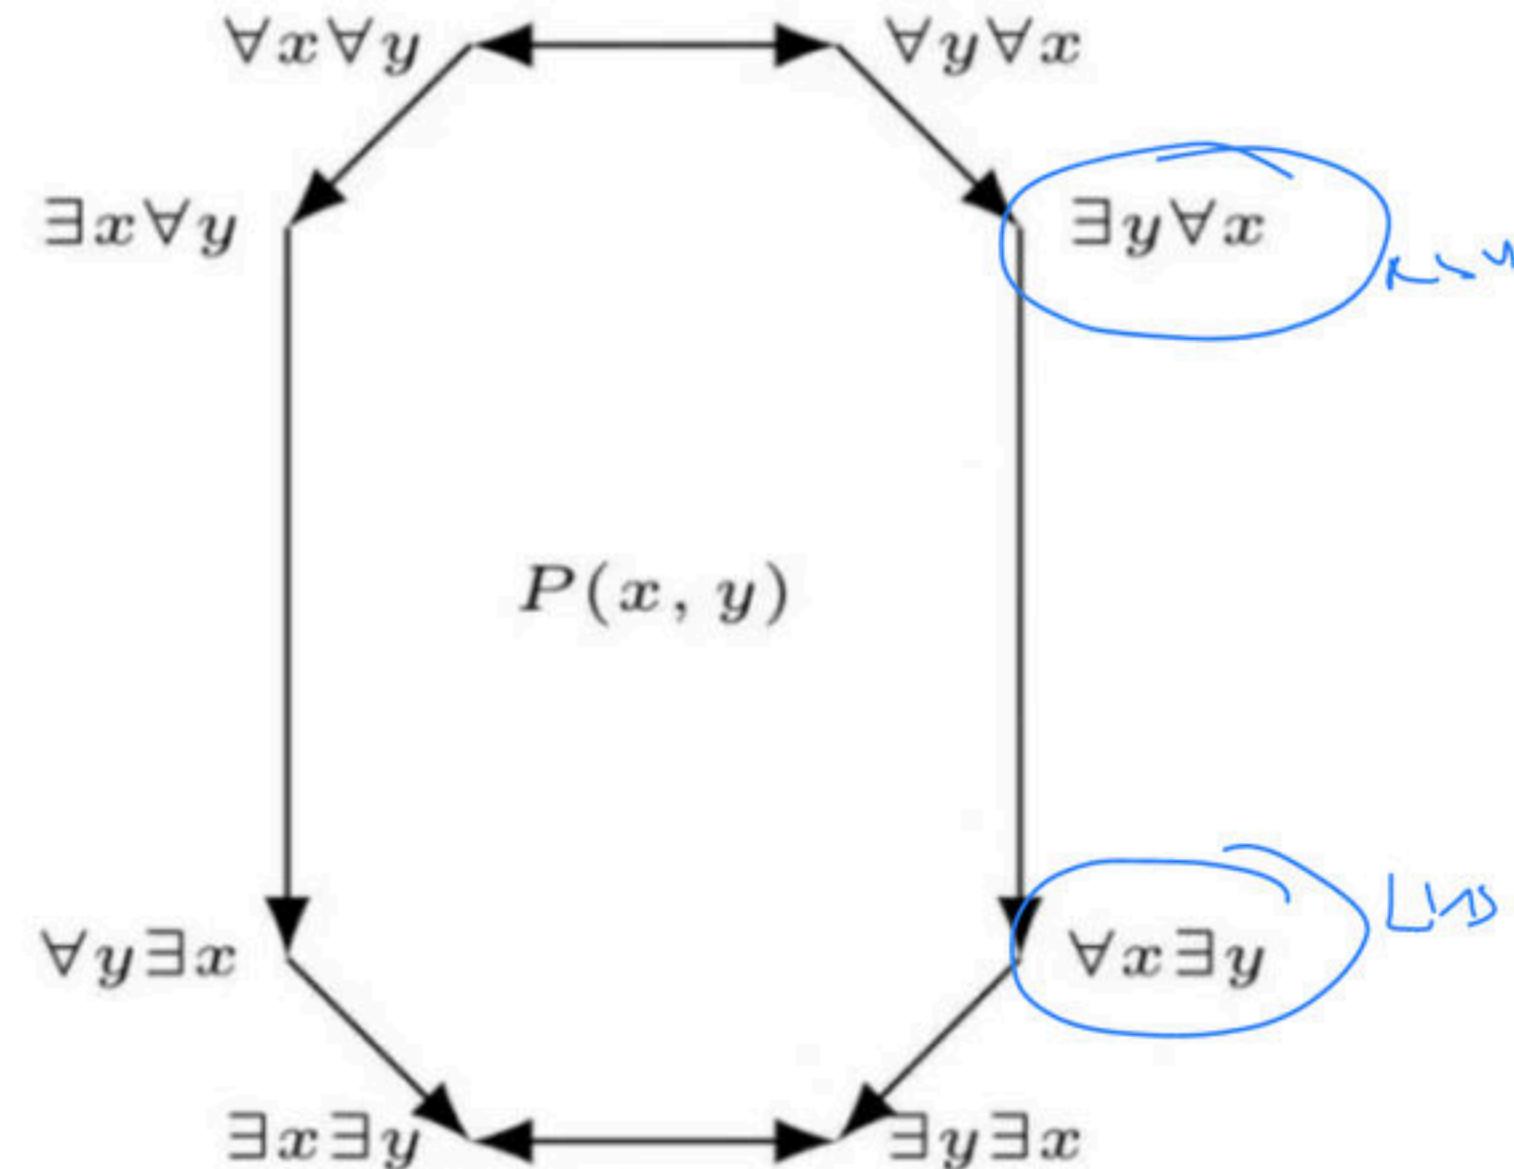

I.  $\exists_y (\exists_x R(x, y))$

II.  $\exists_y (\forall_x R(x, y))$

III.  $\forall_y (\exists_x R(x, y))$

IV.  $\sim \exists_x (\forall_y \sim R(x, y))$

- (A) IV only  
(B) I and IV only  
(C) II only  
(D) II and III only

Q Which one of the following well-formed formulae in predicate calculus is NOT valid? (GATE-2016) (2 Marks)

a)  $(\forall_x p(x) \Rightarrow \forall_x q(x)) \Rightarrow (\exists_x \neg p(x) \vee \forall_x q(x))$   $\frac{1}{2} \quad T$

$\rightarrow \sim \vee$

$P \longrightarrow Q$

b)  $(\exists_x p(x) \vee \exists_x q(x)) \Rightarrow \exists_x(p(x) \vee q(x))$   $\frac{1}{2} \quad T$

$\sim P \vee Q$

$\forall_x P(x) \longrightarrow \forall_x Q(x)$

c)  $\exists_x(p(x) \wedge q(x)) \Rightarrow (\exists_x p(x) \wedge \exists_x q(x))$   $\frac{1}{2} \quad F$

$\sim (\forall_x P(x)) \vee \forall_x \neg P(x)$

$\exists_x \neg P(x) \vee \forall_x P(x)$

d)  $\forall_x(p(x) \vee q(x)) \Rightarrow (\forall_x p(x) \vee \forall_x q(x))$   $\frac{1}{2} \quad 36$

**Q** Let  $P(m, n)$  be the statement "**m divides n**" where the Universe of discourse for both the variables is the set of positive integers. Determine the truth values of the following propositions. **(NET-Dec-2015)**

**(a)**  $\exists m \forall n P(m, n)$

**(b)**  $\forall n P(1, n)$

**(c)**  $\forall m \forall n P(m, n)$

Codes:

$$\underline{\forall x \forall y P(x, y)} \Leftrightarrow \underline{\forall y \forall x P(y, x)}$$

**Q** The CORRECT formula for the sentence, “not all rainy days are cold” is (GATE-2014) (2 Marks)

- a)**  $\forall_d (\text{Rainy}(d) \wedge \neg \text{Cold}(d))$
- b)**  $\forall_d (\neg \text{Rainy}(d) \rightarrow \text{Cold}(d))$
- c)**  $\exists_d (\neg \text{Rainy}(d) \rightarrow \text{Cold}(d))$
- d)**  $\exists_d (\text{Rainy}(d) \wedge \neg \text{Cold}(d))$

**Q** Consider the statement

**"Not all that glitters is gold"**

Predicate  $\text{glitters}(x)$  is true if  $x$  glitters and predicate  $\text{gold}(x)$  is true if  $x$  is gold. Which one of the following logical formulae represents the above statement? **(GATE-2014) (1 Marks)**

a)  $\forall_x: \text{glitters}(x) \Rightarrow \neg\text{gold}(x)$

b)  $\forall_x: \text{gold}(x) \Rightarrow \text{glitters}(x)$

c)  $\exists_x: \text{gold}(x) \wedge \neg\text{glitters}(x)$

d)  $\exists_x: \text{glitters}(x) \wedge \neg\text{gold}(x)$

**Q** The notation  $\exists!_x P(x)$  denotes the proposition “there exists a unique  $x$  such that  $P(x)$  is true”. Give the truth values of the following statements: (NET-June-2014)

I.  $\underline{\underline{\exists!_x P(x)}} \rightarrow \underline{\exists x P(x)}$

$\forall x P(x)$

II.  $\underline{\exists!_x \neg P(x)} \rightarrow \neg \underline{\forall x P(x)}$

$\exists x \sim P(x)$

$\exists !_x P(x)$

$\exists$

(A) Both I & II are true.

(B) Both I & II are false.

(C) I – false, II – true

(D) I – true, II – false

**Q** Which one of the following is **NOT** logically equivalent to  $\neg\exists x(\forall y(\alpha) \wedge \forall z(\beta))$ ?  
**(GATE-2013) (2 Marks)**

- a)**  $\forall_x(\exists_z(\neg\beta) \rightarrow \forall_y(\alpha))$
- b)**  $\forall_x(\forall_z(\beta) \rightarrow \exists_y(\neg\alpha))$
- c)**  $\forall_x(\forall_y(\alpha) \rightarrow \exists_z(\neg\beta))$
- d)**  $\forall_x(\exists_y(\neg\alpha) \rightarrow \exists_z(\neg\beta))$

**Q** What is the logical translation of the following statement? (GATE-2013) (2 Marks)

**"None of my friends are perfect."**

- A)  $\exists_x(F(x) \wedge \neg P(x))$**
- B)  $\exists_x(\neg F(x) \wedge P(x))$**
- C)  $\exists_x(\neg F(x) \wedge \neg P(x))$**
- D)  $\neg\exists_x(F(x) \wedge P(x))$**

**Q** The truth value of the statements :

$\exists !_x P(x) \rightarrow \exists_x P(x)$  and  $\exists !_x \sim P(x) \rightarrow \sim \forall_x P(x)$ , (where the notation  $\exists !_x P(x)$  denotes the proposition “There exists a unique  $x$  such that  $P(x)$  is true”) are : **(NET-Dec-2013)**

- (A) True and False
- (B) False and True
- (C) False and False
- (D) True and True

**Q** Let  $Q(x, y)$  denote " $x + y = 0$ " and let there be two quantifications given as

(i)  $\exists_y \forall_x Q(x, y)$

(ii)  $\forall_x \exists_y Q(x, y)$

Where,  $x$  and  $y$  are real numbers. Then which of the following is valid? **(NET-Dec-2012)**

- (a) I is true and II is false
- (b) I is false and II is true
- (c) I is false and II is also false
- (d) both I and II are true

**Q** What is the correct translation of the following statement into mathematical logic?

**“Some real numbers are rational” (GATE-2012) (1 Marks)**

a)  $\exists_x (\text{real}(x) \vee \text{rational}(x))$  - 1<sup>5</sup>

b)  $\forall_x (\text{real}(x) \rightarrow \text{rational}(x))$  - 5

c)  $\exists_x (\text{real}(x) \wedge \text{rational}(x))$  - 75

d)  $\exists_x (\text{rational}(x) \rightarrow \text{real}(x))$  - 8

**Q** Which one of the following options is CORRECT given three positive integers x, y and z, and a predicate? (GATE-2011) (2 Marks)

$$P(x) = \neg(x=1) \wedge \forall_y (\exists_z (x=y*z) \Rightarrow (y=x) \vee (y=1))$$

**(A)** P(x) being true means that x is a prime number

**(B)** P(x) being true means that x is a number other than 1

**(C)** P(x) is always true irrespective of the value of x

**(D)** P(x) being true means that x has exactly two factors other than 1 and x

**Q** Suppose the predicate  $F(x, y, t)$  is used to represent the statement that person x can fool person y at time t. which one of the statements below expresses best the meaning of the formula  $\forall_x \exists_y \exists_t (\neg F(x, y, t))$ ? **(GATE-2010) (2 Marks)**

**(A)** Everyone can fool some person at some time  $\rightarrow$  1

$$\sim \forall_x \exists_y \exists_t \neg F(x, y, t)$$

**(B) ~~No one can fool everyone all the time~~**  $\rightarrow$  44

$$\sim \exists y \forall x \forall t F(x, y, t)$$

**(C)** Everyone cannot fool some person all the time  $\rightarrow$  20

**(D)** No one can fool some person at some time  $\rightarrow$  28

**Q** Consider the following well-formed formulae:

**1)**  $\neg \forall x(P(x))$

$\exists x \neg P(x)$

**2)**  $\neg \exists x(P(x))$

$\forall x \neg P(x)$

**3)**  $\neg \exists x(\neg P(x))$

$\forall x P(x)$

**4)**  $\exists x(\neg P(x))$

$\exists x \neg P(x)$

Which of the above are equivalent? (GATE-2009) (2 Marks)

- a) I and III - 12
- ~~b) I and IV - 12~~
- c) II and III - 7
- d) II and IV - 1

**Q** Which one of the following is the most appropriate logical formula to represent the statement? “**Gold and silver ornaments are precious**”. The following notations are used:

**G(x)**: x is a gold ornament

**S(x)**: x is a silver ornament

**P(x)**: x is precious **(GATE-2009) (2 Marks)**

**(A)**  $\forall_x (P(x) \rightarrow (G(x) \wedge S(x)))$

**(B)**  $\forall_x ((G(x) \wedge S(x)) \rightarrow P(x))$

**(C)**  $\exists_x ((G(x) \wedge S(x)) \rightarrow P(x))$

**(D)**  $\forall_x ((G(x) \vee S(x)) \rightarrow P(x))$

**Q** Let  $\text{fsa}$  and  $\text{pda}$  be two predicates such that  $\text{fsa}(x)$  means  $x$  is a finite state automaton, and  $\text{pda}(y)$  means that  $y$  is a pushdown automaton. Let  $\text{equivalent}$  be another predicate such that  $\text{equivalent}(a, b)$  means  $a$  and  $b$  are equivalent. Which of the following first order logic statements represents the following. Each finite state automaton has an equivalent pushdown automaton. **(GATE-2008) (1 Marks)**

a)  $(\forall_x \text{fsa}(x)) \Rightarrow (\exists y \text{pda}(y) \wedge \text{equivalent}(x, y))$

b)  $\neg \forall_y (\exists x \text{fsa}(x) \Rightarrow \text{pda}(y) \wedge \text{equivalent}(x, y))$

c)  $\forall_x \exists_y (\text{fsa}(x) \wedge \text{pda}(y) \wedge \text{equivalent}(x, y))$

d)  $\forall_x \exists_y (\text{fsa}(y) \wedge \text{pda}(x) \wedge \text{equivalent}(x, y))$

**Q** Which of the following first order formula is logically valid? Here  $\alpha(x)$  is a first order formula with  $x$  as a free variable, and  $\beta$  is a first order formula with no free variable. **(GATE-2008) (2 Marks)**

**(A)**  $[\beta \rightarrow (\exists x, \alpha(x))] \rightarrow [\forall x, \beta \rightarrow \alpha(x)]$

**(B)**  $[\exists x, \beta \rightarrow \alpha(x)] \rightarrow [\beta \rightarrow (\forall x, \alpha(x))]$

**(C)**  $[(\exists x, \alpha(x)) \rightarrow \beta] \rightarrow [\forall x, \alpha(x) \rightarrow \beta]$

**(D)**  $[(\forall x, \alpha(x)) \rightarrow \beta] \rightarrow [\forall x, \alpha(x) \rightarrow \beta]$

**Q** Let Graph(x) be a predicate which denotes that x is a graph. Let Connected(x) be a predicate which denotes that x is connected. Which of the following first order logic sentences **DOES NOT** represent the statement: “**Not every graph is connected**” ?

**(GATE-2007) (2 Marks)**

- (A)  $\neg \forall_x (\text{Graph}(x) \rightarrow \text{Connected}(x))$
- (B)  $\exists_x (\text{Graph}(x) \wedge \neg \text{Connected}(x))$
- (C)  $\neg \forall_x (\neg \text{Graph}(x) \vee \text{Connected}(x))$
- (D)  $\forall_x (\text{Graph}(x) \rightarrow \neg \text{Connected}(x))$

$$P \rightarrow Q = \neg P \vee Q$$

**Q** Which one of these first-order logic formulae is valid? **(GATE-2007) (2 Marks)**

**(A)**  $\forall x(P(x) \Rightarrow Q(x)) \Rightarrow (\forall xP(x) \Rightarrow \forall xQ(x))$

**(B)**  $\exists x(P(x) \vee Q(x)) \Rightarrow (\exists xP(x) \Rightarrow \exists xQ(x))$

**(C)**  $\exists x(P(x) \wedge Q(x)) \Leftrightarrow (\exists xP(x) \wedge \exists xQ(x))$

**(D)**  $\forall x \exists y P(x, y) \Rightarrow \exists y \forall x P(x, y)$

**Q** Which one of the first order predicate calculus statements given below correctly express the following English statement? (GATE-2006) (2 Marks)

**“Tigers and lions attack if they are hungry or threatened”**

a)  $\forall_x[(\text{tiger}(x) \wedge \text{lion}(x)) \rightarrow (\text{hungry}(x) \vee \text{threatened}(x)) \rightarrow \text{attacks}(x)]$

b)  $\forall_x[(\text{tiger}(x) \vee \text{lion}(x)) \rightarrow (\text{hungry}(x) \vee \text{threatened}(x)) \wedge \text{attacks}(x)]$

c)  $\forall_x[(\text{tiger}(x) \vee \text{lion}(x)) \rightarrow \text{attacks}(x) \rightarrow (\text{hungry}(x) \vee \text{threatened}(x))]$

d)  $\forall_x[(\text{tiger}(x) \vee \text{lion}(x)) \rightarrow (\text{hungry}(x) \vee \text{threatened}(x)) \rightarrow \text{attacks}(x)]$

**Q** What is the first order predicate calculus statement equivalent to the following?

**Every teacher is liked by some student (GATE-2005) (2 Marks)**

(A)  ~~$\forall_{(x)} [\text{teacher } (x) \rightarrow \exists_{(y)} [\text{student } (y) \rightarrow \text{likes } (y, x)]]$~~  — 5

(B)  ~~$\forall_{(x)} [\text{teacher } (x) \rightarrow \exists_{(y)} [\text{student } (y) \wedge \text{likes } (y, x)]]$~~  — 4

(C)  ~~$\exists_{(y)} \forall_{(x)} [\text{teacher } (x) \rightarrow [\text{student } (y) \wedge \text{likes } (y, x)]]$~~  — 20

(D)  ~~$\forall_{(x)} [\text{teacher } (x) \wedge \exists_{(y)} [\text{student } (y) \rightarrow \text{likes } (y, x)]]$~~  — 10

Q Let  $P(x)$  and  $Q(x)$  be arbitrary predicates. Which of the following statements is always TRUE? **(GATE-2005) (2 Marks)**

**(A)**  $((\forall x(P(x)) \vee Q(x))) \Rightarrow ((\forall xP(x)) \vee (\forall xQ(x)))$

**(B)**  $(\forall x(P(x) \Rightarrow Q(x))) \Rightarrow ((\forall xP(x)) \Rightarrow (\forall xQ(x)))$

**(C)**  $(\forall x(P(x)) \Rightarrow \forall x(Q(x))) \Rightarrow (\forall x(P(x) \Rightarrow Q(x)))$

**(D)**  $(\forall x(P(x)) \Leftrightarrow (\forall x(Q(x)))) \Rightarrow (\forall x(P(x) \Leftrightarrow Q(x)))$

**Q** Let  $a(x, y)$ ,  $b(x, y)$  and  $c(x, y)$  be three statements with variables  $x$  and  $y$  chosen from some universe. Consider the following statement: **(GATE-2004) (2 Marks)**

$$(\exists x)(\forall y) [(a(x, y) \wedge b(x, y)) \wedge \neg c(x, y)]$$

Which one of the following is its equivalent?

**a)**  $(\forall x)(\exists y) [(a(x, y) \vee b(x, y)) \rightarrow c(x, y)]$

**b)**  $(\exists x)(\forall y)[(a(x, y) \vee b(x, y)) \wedge \neg c(x, y)]$

**c)**  $\neg(\forall x)(\exists y)[(a(x, y) \wedge b(x, y)) \rightarrow c(x, y)]$

**d)**  $\neg(\forall x)(\exists y)[(a(x, y) \vee b(x, y)) \rightarrow c(x, y)]$

**Q** Identify the correct translation into logical notation of the following assertion.

**Some boys in the class are taller than all the girls**

Note: taller ( $x, y$ ) is true if  $x$  is taller than  $y$ . (GATE-2004) (1 Marks)

(A)  $(\exists_x) (\text{boy}(x) \rightarrow (\forall_y) (\text{girl}(y) \wedge \text{taller}(x, y)))$  13

(B)  $(\exists_x) (\text{boy}(x) \wedge (\forall_y) (\text{girl}(y) \wedge \text{taller}(x, y)))$  1

(C)  $(\exists_x) (\text{boy}(x) \rightarrow (\forall_y) (\text{girl}(y) \rightarrow \text{taller}(x, y)))$  8

(D)  $(\exists_x) (\text{boy}(x) \wedge (\forall_y) (\text{girl}(y) \rightarrow \text{taller}(x, y)))$  67

**Q** Which of the following is a valid first order formula? (Here  $\alpha$  and  $\beta$  are first order formulae with  $x$  as their only free variable) (GATE-2003) (2 Marks)

a)  $\{(\forall x)[\alpha] \Rightarrow (\forall x)[\beta]\} \Rightarrow \{(\forall x)[\alpha \Rightarrow \beta]\}$

b)  $(\forall x)[\alpha] \Rightarrow (\exists x)[\alpha \wedge \beta]$

c)  $\{(\forall x)[\alpha \vee \beta]\} \Rightarrow \{(\exists x)[\alpha]\} \Rightarrow (\forall x)[\alpha]$

d)  $(\forall x)[\alpha \Rightarrow \beta] \Rightarrow ((\forall x)[\alpha]) \Rightarrow (\forall x)[\beta]$

**Q Which of the following predicate calculus statements is/are valid? (GATE-1992)  
(1 Marks)**

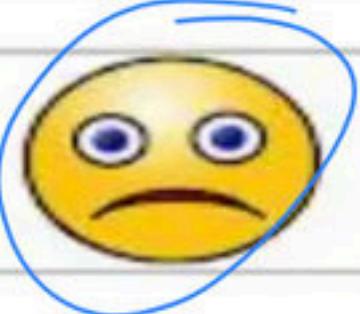

a)  $(\forall(x))P(x) \vee (\forall(x))Q(x) \Rightarrow (\forall(x))(P(x) \vee Q(x))$

b)  $(\exists(x))P(x) \wedge (\exists(x))Q(x) \Rightarrow (\exists(x))(P(x) \wedge Q(x))$

c)  $(\forall(x))(P(x) \vee Q(x)) \Rightarrow (\forall(x))P(x) \vee (\forall(x))Q(x)$

d)  $(\exists(x))(P(x) \vee Q(x)) \Rightarrow \neg(\forall(x))P(x) \vee (\exists(x))Q(x)$

Find the odd one in the group

## **Group Theory**

- Group theory is very important mathematical tool which is used in a number of areas in research and application. Using group theory, we can estimate the strength of a set with respect to an operator.

- This idea will further help us in research field to identify the correct mathematical system to work in a particular research area. E.g. can we use natural numbers in complex problem area like soft computing or studying black holes.

$$ds^2 = - \left(1 - \frac{2GM}{c^2 r}\right) dt^2 + \left(1 - \frac{2GM}{c^2 r}\right)^{-1} dr^2 + r^2 d\Omega^2$$

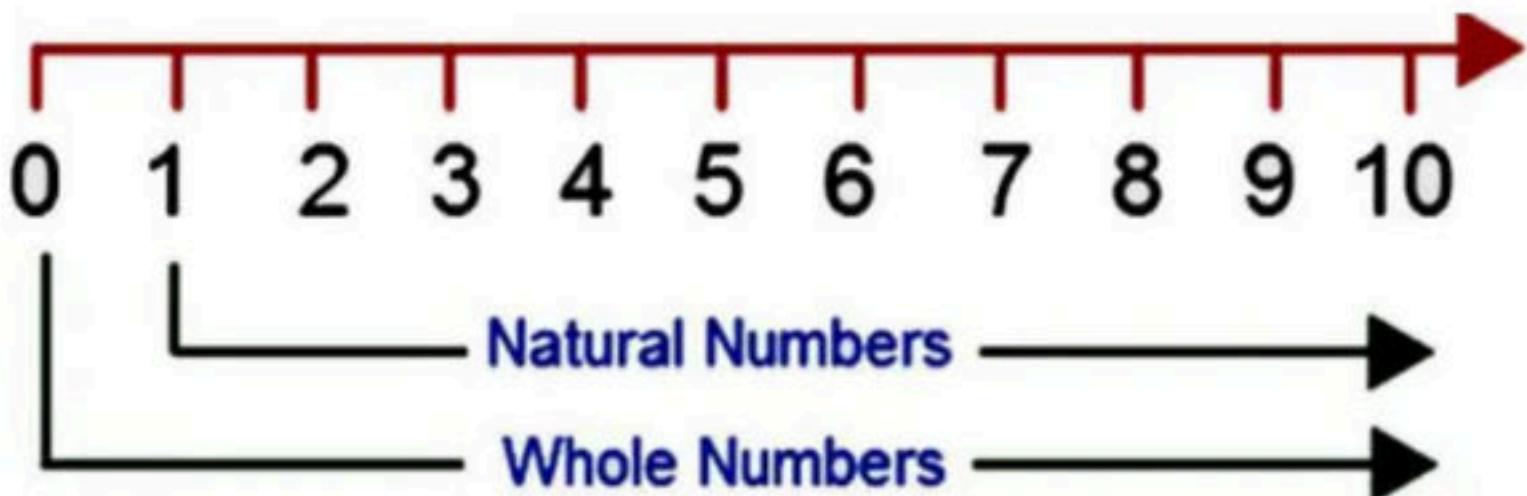

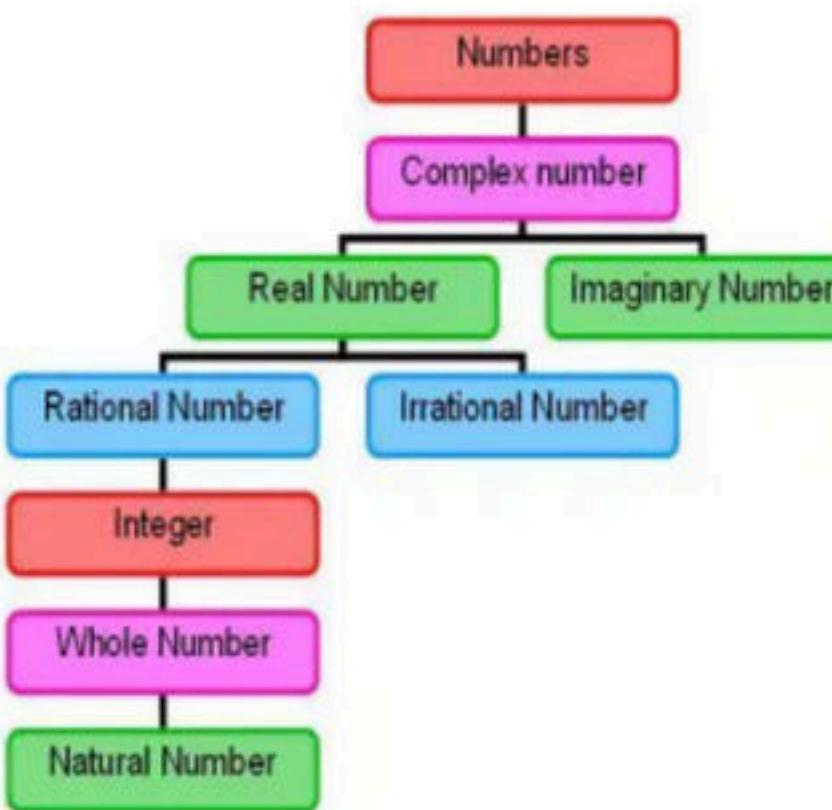

$$|\Delta F_{grav}| = \frac{2GMmd}{r_0^3}$$

$$r_{Horizon} = \frac{2GM}{c^2}$$

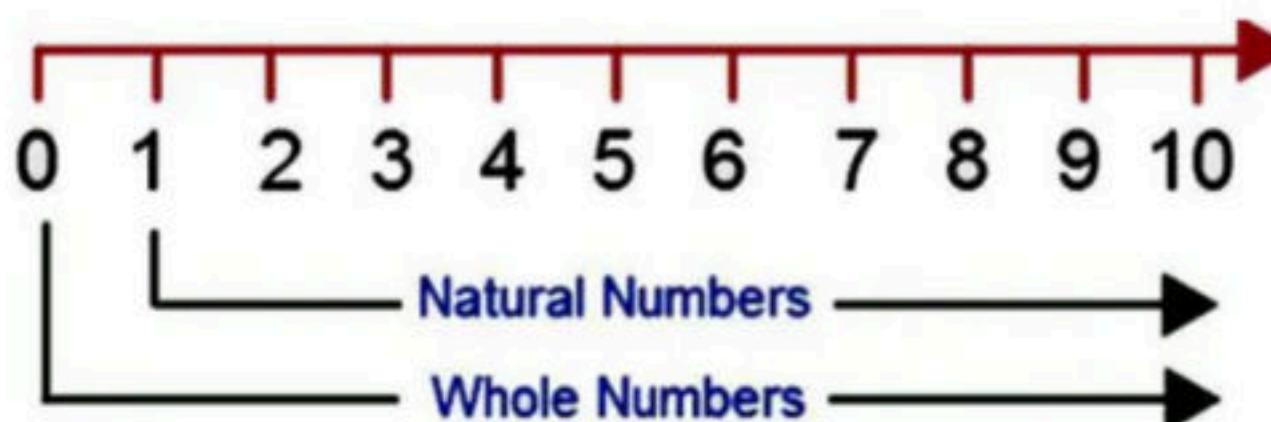

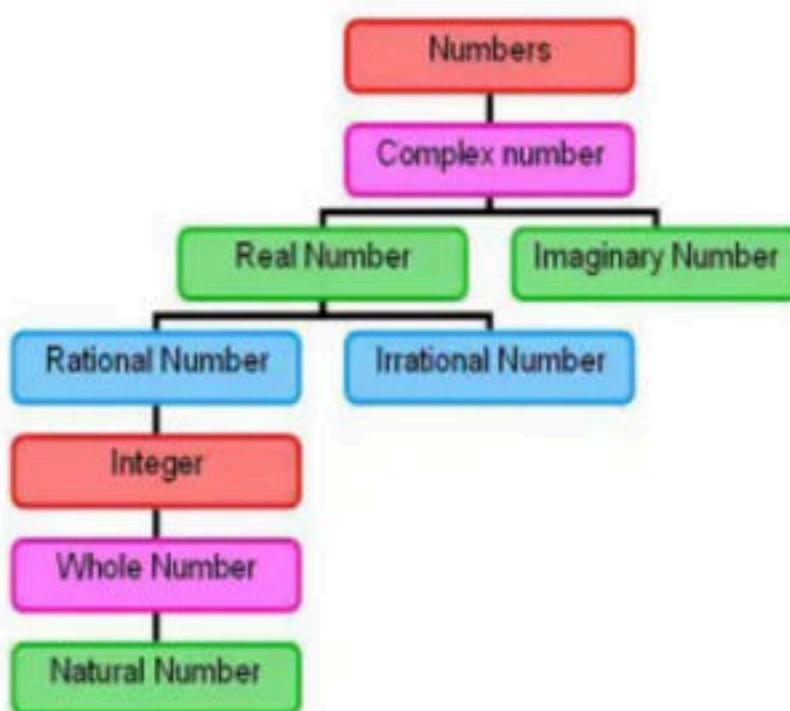

- Now we will directly study some of the basic set related properties and will define some structure of set and operator based on the properties and will check those properties on basics number systems like natural numbers, integers, real numbers etc.

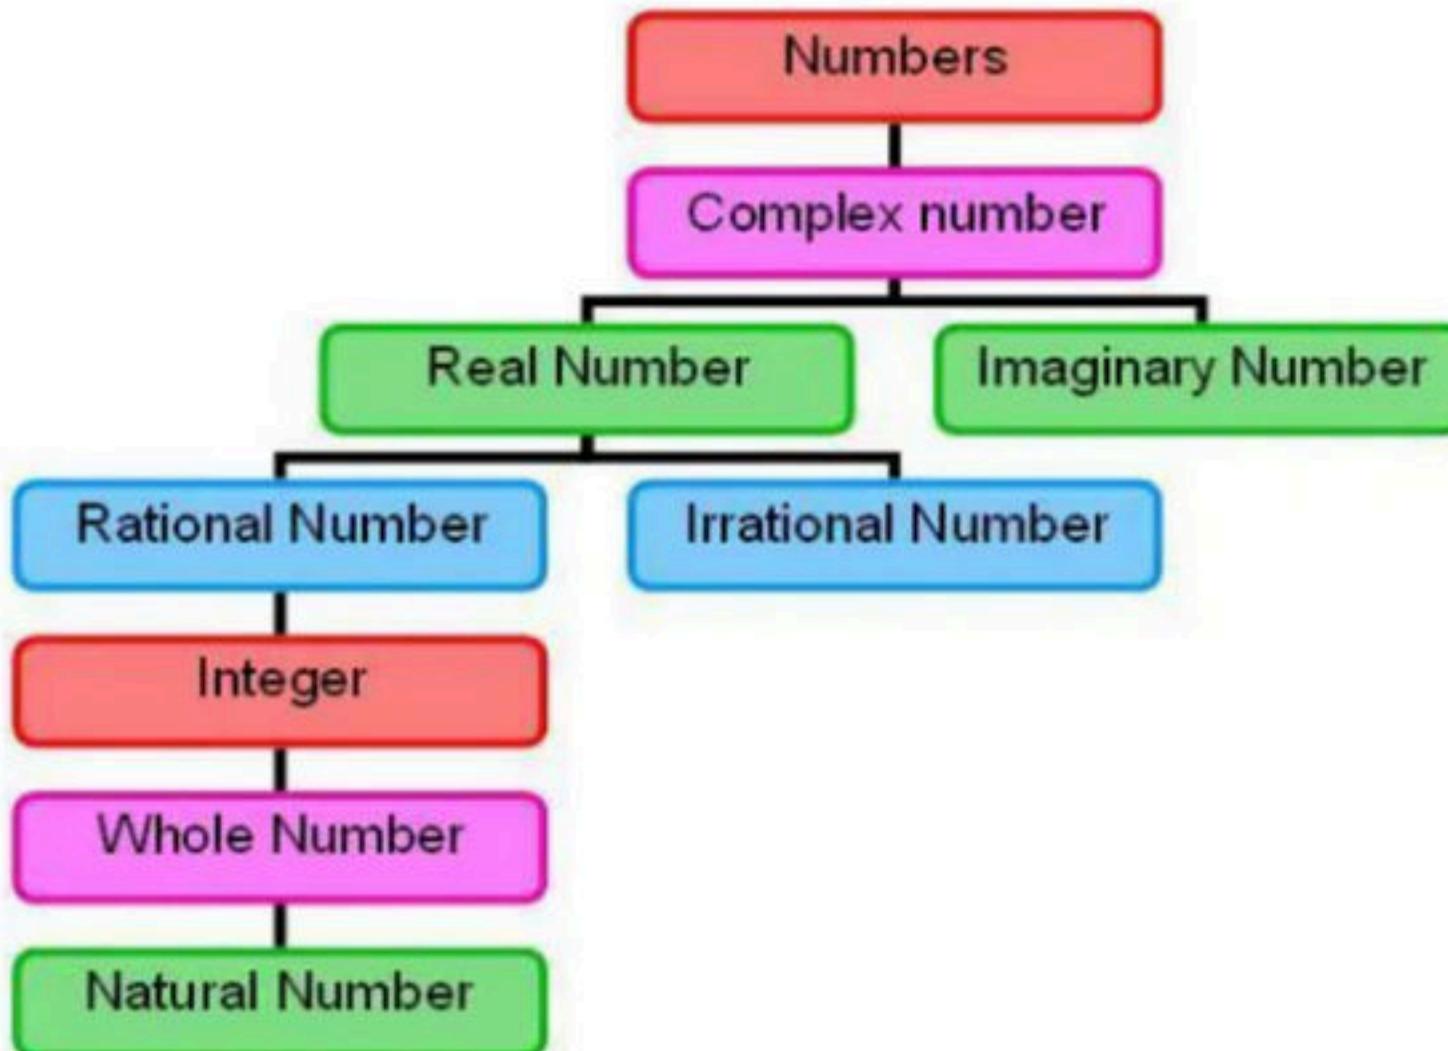

- **Set of all-Natural number(N)** - A natural number is a number that occurs commonly and obviously in nature. The set of natural numbers, can be defined as  $N = \{1, 2, 3, 4, \dots, \infty\}$

- **Set of all Integer(Z)** - An integer is a number that can be written without a fractional component.
- **Set of all Whole number(W)** - A whole number is a science expanded natural number. Set of natural number and zero

- **Set of all Real number(R)** - A real number is a value that represents a quantity along a continuous line, containing all of the rational numbers and all of the irrational numbers.

**Break**

**1. Closure property:** - Consider a non-empty set A and a binary operation \* on A. A is said to be closed with respect to \*, if  $\forall a, b \in A$ , then  $a * b \in A$ .

**2. Algebraic Structure:** - A non-empty set A is said to be an algebraic structure with respect to a binary operation \*, if A satisfy closure property with respect to \*.

**Q** let  $A = \{1, 3, 5, \dots, \infty\}$  and  $B = \{2, 4, 6, \dots, \infty\}$ , what is the highest structure achieved by anyone of them?

**1)**  $(A, +)$

**2)**  $(A, *)$

**3)**  $(B, +)$

**4)**  $(B, *)$

a) Algebraic Structure

b) Semi Group

c) Monoid

d) Group

**Q** Consider a set of natural numbers N, with respect to \*, such that  
 $a * b = a^b$  which of the following is true?

- a)** semi group but not monoid      **b)** A monoid but not a group
- c)** A group      **d)** not a semi group

**Q** let  $\{p, q, r, s\}$  be the set. A binary operation \* is defined on the set and is given by the following table:

*	p	q	r	s
p	p	r	s	p
q	p	q	r	s
r	p	q	p	r
s	p	q	q	q

Which of the following is true about the binary operation?

- a) it is commutative but not associative
- b) it is associative but not commutative
- c) it is both associative and commutative
- d) it is neither associative nor commutative

**Q** Consider a set of integers Z, with respect to \*, such that  
 $a * b = \max(a, b)$  which of the following is true?

- a) Algebraic structure**
- b) semi-group**
- c) Monoid**
- d) group**

**Q** Consider a set of integers Z, with respect to \*, such that  
 $a * b = \min(a, b)$  which of the following is true?

- a) Algebraic structure**
- b) semi-group**
- c) Monoid**
- d) group**

**Q** which of the following is not a group?

a)  $\{ \dots, -6, -4, -2, 0, 2, 4, 6, \dots \}, +$

b)  $\{ \dots, -3k, -2k, -k, 0, k, 2k, 3k, \dots \}, + [k \in \mathbb{Z}]$

c)  $\{2^n, n \in \mathbb{Z}\}, *$

d) set of complex number, \*

**Q** Consider the set of all integers( $Z$ ) with the operation defined as  $m * n = m + n + 2$ ,  $m, n \in Z$

if  $(Z, *)$  forms a group, then determine the identity element

a) 0

b) -1

c) -2

d) 2

**Q** Consider a set of positive rational number with respect to an operation  $*$ , such that  $a * b = (a \cdot b)/3$ , it is known that the it is an abelian group, which of the following is not true?

- a)** identity element  $e = 3$
- b)** inverse of  $a = 9/a$
- c)** inverse of  $2/3 = 6$
- d)** inverse of  $3 = 3$

**Q** Which of the following properties a Group G must hold, in order to be an Abelian group? **(Net Dec 2015)**

- (a)** The distributive property
  - (b)** The commutative property
  - (c)** The symmetric property
- a)** (a) and (b)      **b)** (b)  
**c)** (a) and (b)      **d)** (a), (b) and (c)

**Q** A binary operation  $\alpha$  on a set of integers is defined as  $x * y = x^2 + y^2$ . Which one of the following statements is TRUE about  $*$ ? **(GATE-2013)**

**(1 Marks)**

- (A)** Commutative but not associative
- (B)** Both commutative and associative
- (C)** Associative but not commutative
- (D)** Neither commutative nor associative

**Q** Which one of the following is NOT necessarily a property of a Group? (GATE-2009) (2 Marks)

- (A)** Commutativity
- (B)** Associativity
- (C)** Existence of inverse for every element
- (D)** Existence of identity

**Q** Consider the set H of all  $3 \times 3$  matrices of the type

$$\begin{matrix} a & f & e \\ 0 & b & d \\ 0 & 0 & c \end{matrix}$$

where a, b, c, d, e and f are real numbers and abc ≠ 0.

Under the matrix multiplication operation, the set H is **(GATE-2005) (2 Marks)**

- (A) a group
- (B) a monoid but not a group
- (C) a semigroup but not a monoid
- (D) neither a group nor a semigroup

**Q** Consider the set  $\Sigma^*$  of all strings over the alphabet  $\Sigma = \{0, 1\}$ .  $\Sigma^*$  with the concatenation operator for strings **(GATE-2003) (1 Marks)**

- (A)** does not form a group
- (B)** forms a non-commutative group
- (C)** does not have a right identity element
- (D)** forms a group if the empty string is removed from  $\Sigma^*$

**Q Which of the following is true? (GATE-2002) (2 Marks)**

- (A) The set of all rational negative numbers forms a group under multiplication.**
- (B) The set of all non-singular matrices forms a group under multiplication.**
- (C) The set of all matrices forms a group under multiplication.**
- (D) Both (2) and (3) are true.**

**Q Which of the following statements is FALSE? (GATE-1996) (1 Marks)**

- a) The set of rational numbers is an abelian group under addition
- b) The set of integers in an abelian group under addition
- c) The set of rational numbers form an abelian group under multiplication
- d) The set of real numbers excluding zero is an abelian group under multiplication

**Q** Let A be the set of all non-singular matrices over real number and let \* be the matrix multiplication operation. Then **(GATE-1994) (2 Marks)**

- a) A is closed under \* but  $\langle A, * \rangle$  is not a semigroup.
- b)  $\langle A, * \rangle$  is a semigroup but not a monoid.
- c)  $\langle A, * \rangle$  is a monoid but not a group.
- d)  $\langle A, * \rangle$  is a group but not an abelian group.

**Break**

- **Finite Group**: - A group with finite number of elements is called a finite group.
- **Order of group**: - Order of a group is denoted by  $O(G)$  = no of elements in  $G$

- $R_2: \forall a, b \in G, aR_2b \text{ if and only if } a = b^{-1}$

Which of the above is/are equivalence relation/relations? **(GATE-2019) (2 Marks)**

- (A)**  $R_1$  and  $R_2$       **(B)**  $R_1$  only      **(C)**  $R_2$  only      **(D)** Neither  $R_1$  nor  $R_2$

**Q** There are two elements  $x, y$  in a group  $(G, *)$  such that every element in the group can be written as a product of some number of  $x$ 's and  $y$ 's in some order. It is known that  $x * x = y * y = x * y * x * y = y * x * y * x = e$  where  $e$  is the identity element. The maximum number of elements in such a group is \_\_\_\_\_. **(GATE-2014) (2 Marks)**

**Q** Consider the set  $S = \{1, \omega, \omega^2\}$ , where  $\omega$  and  $\omega^2$  are cube roots of unity. If \* denotes the multiplication operation, the structure  $(S, *)$  forms **(GATE-2010) (1 Marks)**

- (A)** A group
- (B)** A ring
- (C)** An integral domain
- (D)** A field

A **ring** is a set  $R$  equipped with two binary operations<sup>[a]</sup>  $+$  (addition) and  $\cdot$  (multiplication) satisfying the following three sets of axioms, called the **ring axioms**<sup>[b]</sup>:

1.  $R$  is an **abelian group** under addition, meaning that:

- $(a + b) + c = a + (b + c)$  for all  $a, b, c$  in  $R$  (that is,  $+$  is associative).
- $a + b = b + a$  for all  $a, b$  in  $R$  (that is,  $+$  is commutative).
- There is an element  $0$  in  $R$  such that  $a + 0 = a$  for all  $a$  in  $R$  (that is,  $0$  is the additive identity).
- For each  $a$  in  $R$  there exists  $-a$  in  $R$  such that  $a + (-a) = 0$  (that is,  $-a$  is the additive inverse of  $a$ ).

2.  $R$  is a **monoid** under multiplication, meaning that:

- $(a \cdot b) \cdot c = a \cdot (b \cdot c)$  for all  $a, b, c$  in  $R$  (that is,  $\cdot$  is associative).
- There is an element  $1$  in  $R$  such that  $a \cdot 1 = a$  and  $1 \cdot a = a$  for all  $a$  in  $R$  (that is,  $1$  is the multiplicative identity).<sup>[b]</sup>

3. Multiplication is **distributive** with respect to addition, meaning that:

- $a \cdot (b + c) = (a \cdot b) + (a \cdot c)$  for all  $a, b, c$  in  $R$  (left distributivity).
- $(b + c) \cdot a = (b \cdot a) + (c \cdot a)$  for all  $a, b, c$  in  $R$  (right distributivity).

An [integral domain](#) is a nonzero commutative ring in which the product of any two nonzero elements is nonzero. Equivalently:

- An integral domain is a nonzero commutative ring with no nonzero zero divisors.
- An integral domain is a commutative ring in which the zero ideal  $\{0\}$  is a prime ideal.
- An integral domain is a nonzero commutative ring for which every non-zero element is cancellable under multiplication.
- An integral domain is a ring for which the set of nonzero elements is a commutative monoid under multiplication (because a monoid must be closed under multiplication).
- An integral domain is a nonzero commutative ring in which for every nonzero element  $r$ , the function that maps each element  $x$  of the ring to the product  $xr$  is injective. Elements  $r$  with this property are called *regular*, so it is equivalent to require that every nonzero element of the ring be regular.
- An integral domain is a ring that is isomorphic to a subring of a field. (Given an integral domain, one can embed it in its field of fractions.)

Informally, a field is a set, along with two operations defined on that set: an addition operation written as  $a + b$ , and a multiplication operation written as  $a \cdot b$ , both of which behave similarly as they behave for rational numbers and real numbers, including the existence of an additive inverse  $-a$  for all elements  $a$ , and of a multiplicative inverse  $b^{-1}$  for every nonzero element  $b$ . This allows one to also consider the so-called inverse operations of subtraction,  $a - b$ , and division,  $a / b$ , by defining:

$$a - b = a + (-b),$$

$$a / b = a \cdot b^{-1}.$$

## Classic definition [edit]

Formally, a field is a set  $F$  together with two binary operations on  $F$  called addition and multiplication.<sup>[1]</sup> A binary operation on  $F$  is a mapping  $F \times F \rightarrow F$ , that is, a correspondence that associates with each ordered pair of elements of  $F$  a uniquely determined element of  $F$ .<sup>[2][3]</sup> The result of the addition of  $a$  and  $b$  is called the sum of  $a$  and  $b$ , and is denoted  $a + b$ . Similarly, the result of the multiplication of  $a$  and  $b$  is called the product of  $a$  and  $b$ , and is denoted  $ab$  or  $a \cdot b$ . These operations are required to satisfy the following properties, referred to as field axioms (in these axioms,  $a$ ,  $b$ , and  $c$  are arbitrary elements of the field  $F$ ):

- **Associativity of addition and multiplication:**  $a + (b + c) = (a + b) + c$ , and  $a \cdot (b \cdot c) = (a \cdot b) \cdot c$ .
- **Commutativity of addition and multiplication:**  $a + b = b + a$ , and  $a \cdot b = b \cdot a$ .
- **Additive and multiplicative identity:** there exist two different elements  $0$  and  $1$  in  $F$  such that  $a + 0 = a$  and  $a \cdot 1 = a$ .
- **Additive inverses:** for every  $a$  in  $F$ , there exists an element in  $F$ , denoted  $-a$ , called the additive inverse of  $a$ , such that  $a + (-a) = 0$ .
- **Multiplicative inverses:** for every  $a \neq 0$  in  $F$ , there exists an element in  $F$ , denoted by  $a^{-1}$  or  $1/a$ , called the multiplicative inverse of  $a$ , such that  $a \cdot a^{-1} = 1$ .
- **Distributivity of multiplication over addition:**  $a \cdot (b + c) = (a \cdot b) + (a \cdot c)$ .

This may be summarized by saying: a field has two operations, called addition and multiplication; it is an abelian group under addition with  $0$  as the additive identity; the nonzero elements are an abelian group under multiplication with  $1$  as the multiplicative identity; and multiplication distributes over addition.

Even more summarized: a field is a commutative ring where  $0 \neq 1$  and all nonzero elements are invertible.

## Alternative definition [edit]

Fields can also be defined in different, but equivalent ways. One can alternatively define a field by four binary operations (addition, subtraction, multiplication, and division) and their required properties. Division by zero is, by definition, excluded.<sup>[4]</sup> In order to avoid existential quantifiers, fields can be defined by two binary operations (addition and multiplication), two unary operations (yielding the additive and multiplicative inverses respectively), and two nullary operations (the constants  $0$  and  $1$ ). These operations are then subject to the conditions above. Avoiding existential quantifiers is important in constructive mathematics and computing.<sup>[5]</sup> One may equivalently define a field by the same two binary operations, one unary operation (the multiplicative inverse), and two constants  $1$  and  $-1$ , since  $0 = 1 + (-1)$  and  $-a = (-1)a$ .<sup>[nb 1]</sup>

**Q** Which one of the following is false? (GATE-1996) (2 Marks)

- (A) The set of all bijective functions on a finite set forms a group under function composition.
- (B) The set  $\{1, 2, \dots, p-1\}$  forms a group under multiplication mod  $p$  where  $p$  is a prime number
- (C) The set of all strings over a finite alphabet  $\Sigma$  forms a group under concatenation
- (D) A subset  $S \neq \emptyset$  of  $G$  is a subgroup of the group if and only if for any pair of element  $a, b \in S$ ,  $a * b^{-1} \in S$

**Q** Some group  $(G, o)$  is known to be abelian. Then, which one of the following is true for  $G$ ? **(GATE-1994) (2 Marks)**

- A)  $g = g^{-1}$  for every  $g \in G$
- B)  $(goh)^2 = g^2oh^2$  for every  $g, h \in G$
- C)  $g = g^2$  for every  $g \in G$
- D)  $G$  is of finite order
